

# HOW TO FIND JOB IN AI

Marco Giancola (BA in Math, MA in Satellite Systems; teacher, database developer, scientific writer)

Gianluca Baldassarre (Researcher ISTC-CNR)

## The problem to solve

To understand how to get job in artificial intelligence. What will we be able to do after AS-AI? How and where will we have to look for a job? What kinds of job?

## Report

I have looked for the answers to these questions on the web and I have wrote a report where I have inserted the results of my research. It is a 15 pages document where I illustrate and analyze the job opportunities in AI. This is the first part of my project.

## Neural network

The second part of my project consists in development with Python of an artificial neural network which is a CVs classifier. It will take a CV as input and it will “tell” us if it belongs to a data scientist or not.
