Introduction

AdHd Leveling Tool is a Tube Leveling Amplifier inspired by the legends and carefully crafted to meet your compression needs. The ideal compressor for vocals.

Perfect for giving character and taming the peaks on any track in the mix.

Available for

Windows VST 64/32 bit host compatible

Mac AU/VST 64/32 bit host compatible

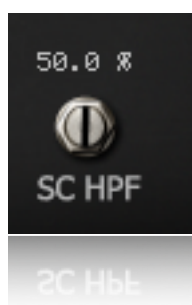

Controls

Short description of the available controls of this plugin.

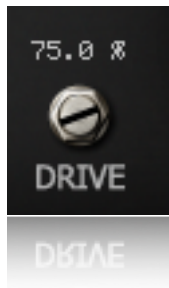

Meter

Select if the VU-Meter is showing Gain Reduction or Output volume

Sidechain High Pass Filter

Add a Highpass filter to the signal the compressor is listening to. Can be used to get rid of pumping effect on bass heavy stuff and make the compression a little bit more transparent.

Drive

The Drive knob controls the amount of added tube saturation to the signal

Gain

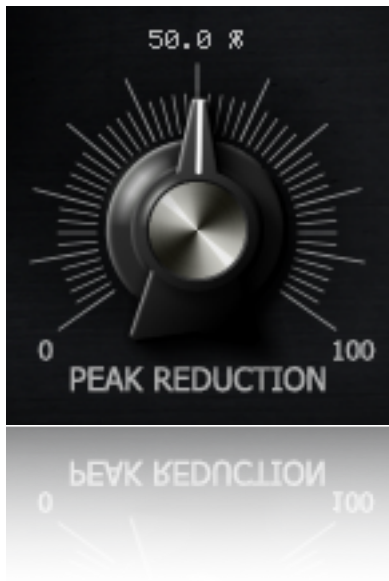

After adding peak reduction the volume of the signal will get lowered. Add some make up gain to get it back to level again.

The Leveling Tool has a tube drive effect built to it and the more gain applied the more the tube drive is working.

VU Meter

Visual representation of what is going on. Use meter switch to select if it is showing gain reduction or output volume.

Peak Reduction

Sets the threshold from where to start Peak Reduction.

Attack And Release

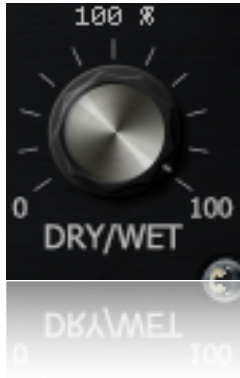

Attack is the amount of time to it takes to lower the gain after reaching the threshold, and Release is the amount of time it takes to stop performing gain reduction, after the signal back is under the threshold.

Ratio

The amount of gain reduction is determined by ratio.

A ratio of 5:1 means that if input level is 5 dB over the threshold, the output signal level is 1 dB over the threshold. The level has been reduced by 4 dB.

**Dry/Wet**

This can be used for parallel compression, can be nice on drums but usually this control should be set to 100% Wet.
