Built-in root causes[1] are <u>always</u> domain independent

Unhandled complexity on the wholeness

No proper long-term planning[2]

Solvability

Insolvability

weeks   months   year   years   Time

Root cause[3] (built-in to our way of working)   Effect[3] - seen in the organization (early indication of built-in root causes)   Effect[3] - product problems (late indication of built-in root causes)
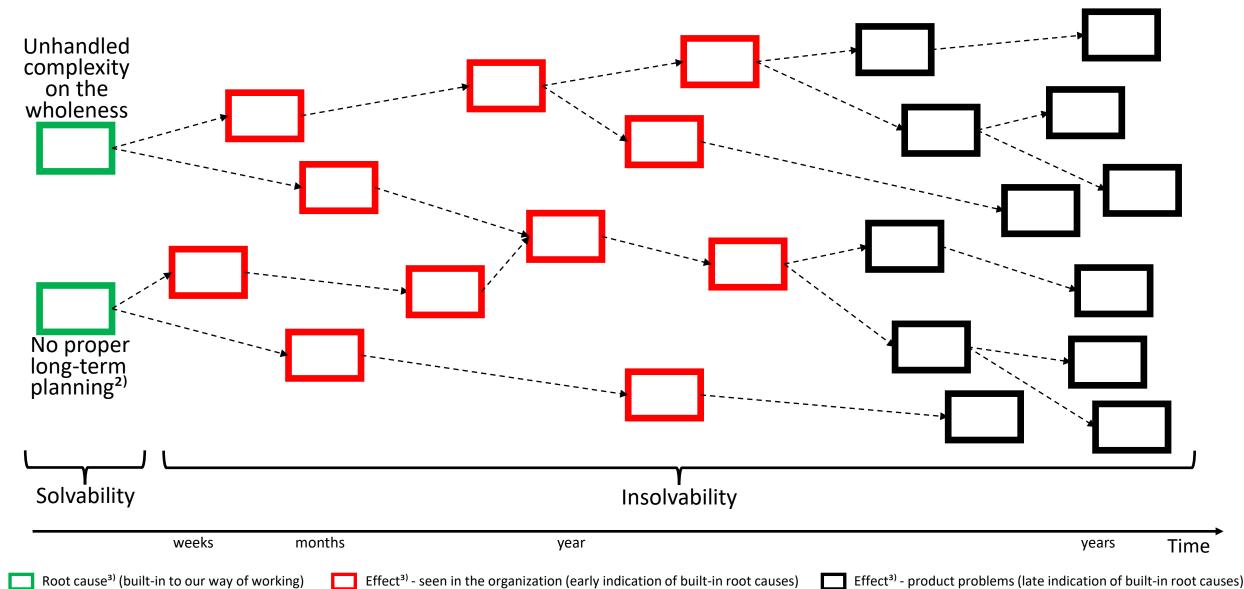

1) clearly distinguished from other root cause(s), where SPPA will help us clear this out   2) Variability to be handled   3) Contextual[4] = domain independent = different organizations, same effects. No domain in sight.

4) Interesting key insight: axioms for context are from natural science, so by fulfilling these axioms we will avoid that our way of working itself generates social science issues (otherwise it always will!).   © 2024 TSCS AB
