

# CBC ALU 35 P

- spray cleaner for industrial applications

## Properties/Uses:

**CBC ALU 35 P** is an alkaline product with strong cleaning power, even with the most difficult contaminants, such as resinized wood chips, grease and soda deposits.

**CBC ALU 35 P** is also effective when oils rich in saponification are added still de-emulsifying.

**CBC ALU 35 P** can be used with hard water without hardness deposits occurring.

## Product use:

The product is used in ultrasonic vessels and washing machines.

Has extremely high cleaning power.

Is a very strong de-emulsifier

The product can be dosed automatically

Material compatibility: ferrous materials, stainless steel, aluminum, magnesium, copper,  
Brass, alkali-resistant plastic and glass enamel surfaces

## Contents:

Concentration: up to 5% by volume

Polished aluminum and other very alkali-sensitive surfaces possibly only 1-3%

(Make a pre-test)

## Temperature:

Optimum working temperature: 35 - 80 ° C

Liquid impurities are removed by oil separators

Skimmer/skimming is eliminated.

The function of an oil separator must be monitored regularly.

The pH of the solution is monitored and when product is added held class 11.5 to 12.0.
