👤 RESUMÉ

My name is Daniel. I am 25 years old and I live in Herning, where I study M.Sc. in Technology Based Business Development at Aarhus University. I expect to complete the master program in the summer of 2020. I am motivated by working with new Technology, People and practical application of technology. Technology can be novel and innovative, however without the practical application, Technology is nothing. I want to combine my passion for technology with project management, creating value adding solutions for people who need them.

With several tools in the toolbox, I have an eye for managing Quality with a red belt certification in Six Sigma. I hope to combine this with my interest in IT and Web Technology. I have completed courses in programming for the Web (PHP, MySQL) along with Web scripting (HTML, CSS) while also being self-taught in software like Adobe Photoshop, Illustrator, and InDesign. My new target is to achieve Machine Learning with python programming using tools such as Kaggle, and Keras using Google's TensorFlow.

I am currently employed at DOVISTA A/S coordinating projects regarding replacement of leased assets i.e. laptops, smartphones and tablets has taught me the importance of stakeholder management. Having worked for Aarhus University as a mentor for other students, I believe in approaching colleagues, customers and challenges with a positive and open mind. During my education, I have worked with personality tests and my key virtues are being action orientated through direct approach while also having a desire to know and understand to maintain clarity and precision.
