

Paddle holder Farleden

The paddle holder can be mounted in two ways, directly onto the deckor onto a deck rigging line.

Design Farleden

To mount the paddle holder onto the deck.

1. Use the top of the cradle as a template. Mark where the holes are to be drilled.

2. Drill with 4 mm drill.
Assemble the top of the cradle and the Velcro using the longer screws that are included in the package.

3. Use the bottom of the cradle as a ”nut” under the deck. Screw the top and bottom pieces together.

4. The paddle holder is now firmly attached to the line.

How to mount the paddle holder onto the line.

1. Thread the kayak rope through the slot in the velcro.

2. Place the bottom of the cradle between the cord and Velcro. If the cord is so thin that the holder slides along the cord, wrap some fabric tape around the cord.

3. Put on the top of the cradle and fit the bevelled edges together, then screw the cradle in place.

4. The paddle holder is now firmly attached to the line.
