

## Wälivaara OM-Nylon Cross-over

This over model is based on the popular OM body size but features a 48 mm nut width, making the transition from steel string to nylon string much easier with similar neck feeling and only slightly more spacing between the strings.

OM Nylon cross-over model with top in Sitka spruce, ebony bridge and fretboard and customized rosette in birds-eye birch.

Slotted headstock ebony headplate, with optional binding and purfling

Lightweight fan bracing (spruce)

Rosewood binding and end graft

OM –Nylon model uses basically the same construction principles as steel string version except for the lighter top fan bracing, a lightweight bridge as well as slotted headstock.
