Making Wi-Fi Direct (Simple AP) Connection Settings

This method allows you to connect the scanner directly to devices without a wireless router. The scanner acts as a router.

> **❗ Important:**
>
> *When you connect from a smart device to the scanner using a Wi-Fi Direct (Simple AP) connection, the scanner is connected to the same Wi-Fi network (SSID) as the smart device and communication is established between them. Since the smart device automatically connects to other connectable Wi-Fi networks when the scanner is turned off, it does not connect to the previous Wi-Fi network again when the scanner is turned on. Connect to the scanner's SSID in Wi-Fi Direct (Simple AP) from the smart device again. If you do not want to connect every time you turn the scanner on or off, we recommend using a Wi-Fi network by connecting the scanner to a router.*

Network Problems

When You Cannot Make Network Settings

Turn off the devices you want to connect to the network. Wait for about 10 seconds, and then turn on the devices in the following order; access point, computer or smart device, and then scanner. Move the scanner and computer or smart device closer to the access point to help with radio wave communication, and then try to make network settings again.

Cannot Connect from Devices Even Though Network Settings are No Problems

If you cannot connect from the computer or smart device to the scanner even though network settings of the scanner are no problem, see the following.

❑ When you are using multiple wireless routers at the same time, you may not be able to use the scanner from the computer or smart device depending on the settings of the wireless routers. Connect the computer or smart device to the same wireless router as the scanner.

Disable the tethering function on the smart device if it is enabled.
❑ You may not be able to connect to the wireless router when the wireless router has multiple SSIDs and devices are connected to different SSIDs on the same wireless router. Connect the computer or smart device to the same SSID as the scanner.
❏ A wireless router that is compliant with both IEEE802.11a and IEEE802.11g has SSIDs of 2.4 GHz and 5 GHz. If you connect the computer or smart device to a 5 GHz SSID, you cannot connect to the scanner because the scanner only supports communication over 2.4 GHz. Connect the computer or smart device to the same SSID as the scanner.
❏ Most wireless routers have a privacy separator feature that blocks communication between connected devices. If you cannot communicate between the scanner and the computer or smart device even if they are connected to the same network, disable the privacy separator on the wireless router. See the manual provided with the wireless router for details.
