Guide to production of pocket cards:

Print page 2 in colors onto A5 paper, fold lengthwise and laminate the card.

ALBUMIN

Randomised to albumin use

Albumin should be used

✓ During circulatory failure
in addition to crystalloids (resuscitation)

✓ For substitution in case of:
- o Suspected or overt albumin loss
- o Plasma albumin levels ⩽25 g/L

Decisions around timing, volume, and concentration of albumin, and its use for other indications, are at the clinician's discretion.
Plasma albumin should be measured according to local practice.

ALBUMIN

Randomised to no albumin use

Albumin should not be used

In case of the following special circumstances, albumin may be considered:

- Large volume ascites drainage (i.e., >1L tapped)
- Spontaneous bacterial peritonitis
- Hepatorenal syndrome
