PLANTATION

2021

# VISION

Leading supplier of Indonesian produce to the world and improving the welfare of farmers in Bali, Indonesia.

# MISSION

Providing the best-quality of Indonesian agricultural products which is produced with ethical and sustainable practices.

# The Process of Cocoa Beans

## PLANTATION

Our farmers' plantations always use natural fertilizers to produce cocoa fruit that is free from chemical content.

## FIRST PROCESS

In the first process, we separate the cocoa beans and skins and we are ready to go to the next process.

## FERMENTATION PROCESS

In this process, the cocoa beans are fermented at the correct temperature and time.

# The Process of Cocoa Beans

## DRYING PROCESS

Since Indonesia is a tropical country, we dry our cocoa beans using strong sunlight to achieve the right moisture content.

## SORTING PROSSES

Before going to the final stage, we do a sorting of cocoa beans that are less than the predetermined standard.

## STORING

in this final stage we store our products properly and in order to maintain the quality of the cocoa beans.
