# *Our Products*

## MUD CRAB

Scylla Serrata is an animal in the crustacean group. As the name suggests, this type of crab does live in mangrove forests. Mangrove crabs can live in various water conditions and get nutrients from the mangroves for them to grow into adult crabs.

These crabs can also help maintain the balance of the ecosystem in the area where these crabs live, namely in mangrove areas.

Size = 300g, 400g, 500g, 700g, 1000g, Up

## SHRIMP

Vannamei and Tiger shrimp has the characteristics of being able to adapt to a low-temperature environment, having a high survival rate and resistance to disease.

The benefits of consuming this shrimp, high protein, containing Vitamin D, Iron, reduce the risk of heart disease, cardiovascular disease, prevent the effects of premature aging, and improve brain function.
