Fixed Carbon
Packing (sack)

PRODUCT SPECIFICATION

COCONUT BBQ CHARCOAL BRIQUETTE

The environmentally responsible and sustainable way to light your grill is with these coconut shell briquettes. It is created with recycled coconut shells. The coconut briquettes are fully wood free, ignite rapidly, and sustain a high temperature for a considerable amount of time, so you are not losing any burn power by not using wood.

RICE HUSKS CHARCOAL

Roasted husks are an excellent planting medium for plants. Roasted husks have the ability to loosen soil, bind nutrients to plants, and improve soil acidity. Burned husks contain silica, which can strengthen the leaves, allowing the plant to stand taller and encourage the formation of plant cells.

RICE HUSK

Husk is the outer shell of the rice grain which is commonly called the rice shell. The benefits of rice husks can be used as organic fertilizer. Processing is usually done by burning. This is because rice husks can loosen the soil and the types of chemical elements in it are very good for soil fertility.
