Coconut Charcoal Briquette

Coconut Charcoal Briquettes are charcoal briquettes made from coconut shells as raw material. One of the main functions of Coconut Charcoal Briquettes is for shisha or hookah burners. Apart from that, people also use lower grades for barbecue purposes.

There are many benefits of using coconut charcoal compared to other types of charcoal. First, coconut charcoal briquettes have a relatively higher burning point and longer burning time compared to other types of charcoal. Besides, it produces less smoke and a natural aroma which is the best choice for your shisha/hookah companion. Apart from that, you can also use coconut charcoal briquettes to cook your food, such as barbecue. Because it has a higher burning point, it won't burn your food easily.
