COCONUT

Copra

Edible copra is produced by exposing it to the air and drying it to the sun. Alternatively during the rainy season, copra is produced by hot-air drying, an oven-like method using a small fire pit which is sheltered from rain by a roof.

Coco Fiber

Also known as Coir. It is a natural fiber extracting the coir from coconut. Coir is obtained by separating the fibrous layer from the hard shell. The best way to do this is using a machine specially made for extracting the coir in an efficient and effective ways

Coco Peat

Coco peat is a great medium for plants. It contains plenty of potassium, zinc, iron, manganese and copper. The character of coco peat is that it can retain high moisture for a long time, making it perfect for plants.

COCONUT

Desiccated Coconut

Came from a fresh picked coconut, desiccated coconut went through several careful steps. For the end product to have a very good quality, the coconut needs to come from a good coconut tree. Desiccated Coconut ends up in a form of flakes or shredded and dried.

Coconut Shell Powder

Coconut Shell Powder comes from a matured coconut shell. It goes through several processes such as breaking it down into small pieces and grinding it, before it becomes a final product. Coconut Shell Powder is known to be a very good filler material.

Coconut Broom Stick

High Quality Coconut Broom Sticks are made out of coconut leaf stick coming from a coconut tree, a strong and tall kind of one which grow near the shore. With the tremendous amount of coconut trees growing in Indonesia and the favourable geography of the country, it is clear the potential for this product is great.

COCONUT OIL

Refined Bleaching Deodorized Coconut Oil

This coconut oil product has medium chain triglyceride fatty acids, tastes bland and also does not smell, so it can be easily used as a mixture of raw materials for making soap, cosmetics and processed foods which are increasingly being favored. Therefore, RBD Coconut Oil is the material of choice in large-scale frying in the food industry because it is proven to be healthier than vegetable oils from other sources.

Virgin Coconut Oil

Virgin coconut oil preserves the goodness of coconut milk and doesn't allow it to be spoiled by the heating process that regular coconut oil does. This is made possible through cold process technology, so the coconut milk extraction process does not need heating to ensure its natural goodness remains intact.

Virgin coconut oil helps the healthy functioning of the thyroid and endocrine systems, and increases the body's metabolic rate so that it can help with weight loss.

Fractionated Coconut Oil

Fractionated coconut oil is an oil made from ordinary coconut oil which is a source of medium-chain triglycerides (MCT).

This type of coconut oil is produced through a process called fractionation. Fractionation is used to separate different types of fats that are naturally found in some oils.

FLOUR

Tapioca Starch

Tapioca is a starch extracted from the storage roots of the cassava plant. It contains no fat or cholesterol, which makes it a healthy choice for those watching their dietary cholesterol and saturated fat intake. Tapioca is also very low in sodium

Cassava Flour

Cassava flour is made by grating and drying the fibrous cassava root. It's a great substitute for wheat and other flours. Cassava flour is very rich in carbohydrates. It's also high in vitamin C, which acts as an antioxidant to help relieve stress, support your immune system and can contribute to skin health.

Corn Flour

Corn flour is made from dry white corn that is ground into flour with grains like sand, corn flour is a popular food ingredient commonly used as a thickener in soups or sauces, and is used to make corn syrup and other sweeteners.

PALM KERNEL

Palm Kernel Expeller

Palm Kernel Expeller is a by-product of the palm oil extraction process from the palm fruit and it is a highly fibrous and medium grade protein feed . The product contains protein and fat which can be used to feed livestock, even poultry and the form of powder like soil.

Palm Kernel Shell

Palm Kernel Shell are a side product derived from the production of palm kernel oil and palm oil from the palm tree seeds. The palm kernel shell is thick and wood like and hence a perfect fuel for wood co-generation plants, thermal power stations, biomass power and industrial plants.

Palm Broom Stick

Almost all parts of the oil palm plant can be used. Part of the trunk can be a building material. Palm roots can also be made into handicrafts that have high artistic value. Likewise with the stick. There are two types of palm sticks exported, regular and super. Regular categories must be at least 90 cm long and green or brown in color. Meanwhile, super quality sticks are up to 100 cm long, have a yellowish green color, have a dryness level of 30 percent, and are not moldy.

Betel Nut

Betel nut or Areca nut or Areca catechu is a plant that has many benefits. Areca nut can grow to a height of 15–20 meters and a diameter of 15 cm. Areca nut or the fruit of the areca nut tree is reddish brown in color and contains alkaloids and proanthocyanins which are included in the flavonoid class. That is, areca nut contains antibacterial and antiviral effects. Therefore, the seeds are often used in traditional ingredients to treat dysentery, bloody diarrhea, and scabies.

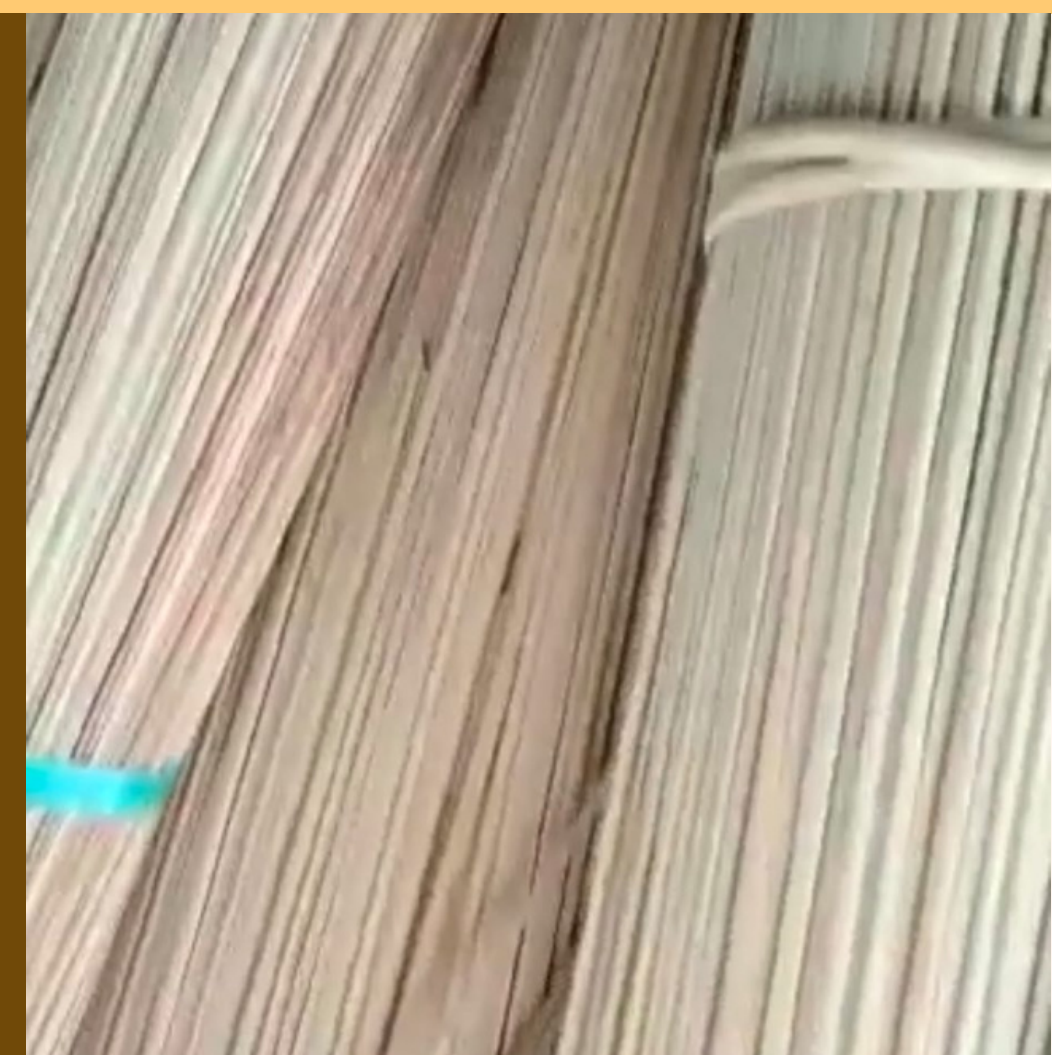

Dammar Gum

Dammar gum is the result of secretion (sap or gum) from the trees Shorea sp, Vatica sp, Dryobalanops sp, and others from the meranti-merantian tribe or Dipterocarpaceae. It includes cat's eye and dark amber. Damar is used in the manufacture of matches (to prevent the fire from burning the wood too quickly), plastics, plaster, varnish, and lacquers. Damar gum is a triterpenoid resin, containing many triterpenes and their oxidation products. There are two other types of resin, apart from gum resin: Cat's eye is a crystalline resin, usually in the form of round balls. Stones in the form of marbles, opaque colored resin collected from the ground.

Nipa Broom Stick

Nipa (Nypa fruticans) is a palm-type plant that grows in mangrove forests or tidal areas near the seaside. Nipa palm plants have stems submerged under a layer of mud that spreads underground. Nipa is used as a means of traditional ceremonies, incense and cleaning tools such as brooms and handicrafts.
