Documentation OF Production Processes and Export Activities

To continually improve product quality This organic coconut sugar factory is located in Purbalingga, by implementing HACCP certification which maintains the quality of our products. It is the place of origin of the traditional wisdom of Indonesian coconut sugar. This is an area where thousands of coconut farmers are long-standing and trained for organic coconut farming, and coconut sugar production. This geographic benefit gives you the closest distance to the source without intermediaries

We want to make sweet products and also produce sweet fruit for farmers in the village.

Coconut Sugar stamped 'Bunga Palm' has penetrated the export market of Malaysia, Singapore, Japan, and the European continent. These countries are very strict about hygiene, quality and must be completely organic. Initiated by Mr. Gunarto, this powdered coconut sugar entrepreneur tries to make coconut sugar products free of preservatives, practical, hygienic, clean, and healthy.

Aspect	Organic Coconut Sugar	Cane Sugar
Source	Derived from coconut palm	Extracted from sugarcane
Processing	Minimal processing	Extensive processing
Color	Golden to dark brown	White to light brown
Taste	Caramel-like, with coconut flavor	Sweet, with a subtle molasses
Glycemic Index	Lower (Glycemic Indeks : 35)	Higher (Glycemic Indeks : 60)
Nutritional Content	Contains minerals & antioxidants	Minimal nutrients
Sustainability	Organic farming practices	Cultivation practices vary
Environmental Impact	Low impact on ecosystems	Pesticide use in cultivation
Health Considerations	Lower glycemic impact	Higher glycemic impact
