# Description

Pineapple, *Ananas comosus*, is an herbaceous biennial or perennial plant in the family Bromeliaceae grown for its edible fruit. This fruit, known as a pineapple, has a tough rind made up of hexagonal units and a fibrous, juicy flesh. Pineapples helps in Immune system support, it helps to improve bone health, Digestion and eye sight. Pineapples can help reduce the risk of macular degeneration, a disease that affects the eyes as people age

# Nutritional Characteristics

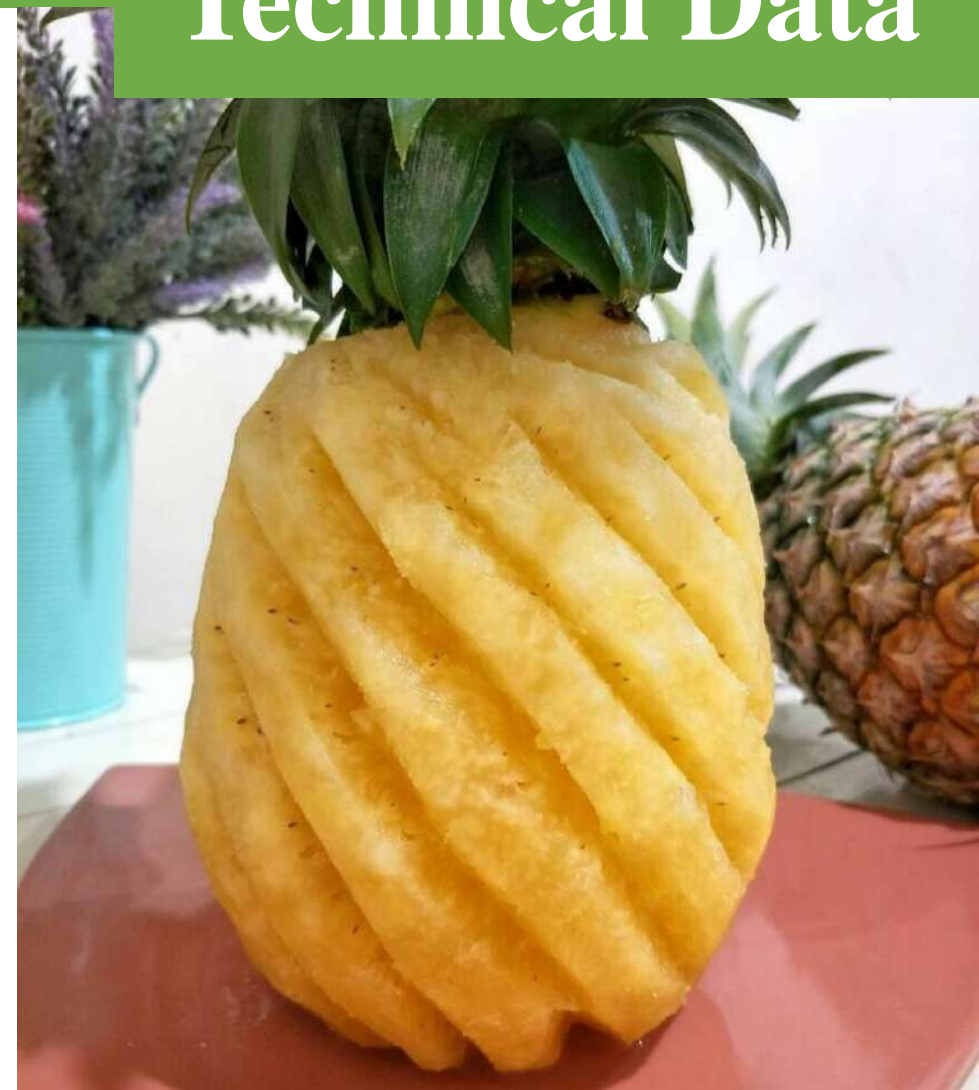

Pineapple is a tropical fruit with a tough outer shell that looks like a pine cone with edible yellow fruit inside. Pineapples have exceptional juiciness and vibrant tropical flavor that balances the tastes of sweet and tart. The area closer to the base of the fruit has more sugar content and therefore a sweeter taste and more tender texture

# Description

Mangosteen (*Garcinia mangostana*) is an exotic, tropical fruit with a slightly sweet and sour flavor. Mangosteen is used for diarrhea, urinary tract infections (UTIs), gonorrhea, thrush, tuberculosis, menstrual disorders, cancer, osteoarthritis, and an intestinal infection called dysentery. The fruit is sometimes referred to as purple mangosteen because of the deep purple color its rind develops when ripe. In contrast, the juicy inner flesh is bright white. The flavor of the tropical—and difficult to find—mangosteen has been described as a delicious mix of lychee, peach, strawberry, and pineapple

# Nutritional Characteristics

Mangosteen is relatively low in calories yet provides many essential nutrients. Mangosteen contains several nutrients with antioxidant capacities, such as vitamin C and folate. Plus, it provides xanthenes — a unique type of plant compound known to have strong antioxidant properties. In several studies, the antioxidant activity of xanthenes has resulted in anti-inflammatory, anticancer, anti-aging, and antidiabetic effects. Mangosteen is also rich in fiber, which offers various benefits. For instance, some animal research indicates that a higher-fiber diet may help reduce your body's inflammatory response.

# Description

Dragon fruit (Hylocereus) is also known as a pitaya and is a tropical plant that produces edible fruit. This is a fruit that is often seen in health food stores and it originates from several different places. Dragon fruit is used for food and medicine. Dragon fruit tastes wonderful! It's sweet and crunchy, with a flavor similar to a kiwi and pear combination. It features a mouth-watering light sweet taste, an intense shape, and color, and the flower is striking and very fragrant. In addition to being tasty and refreshing, this beautiful fruit boasts a lot of water and other vital minerals with varied nutritional ingredients.

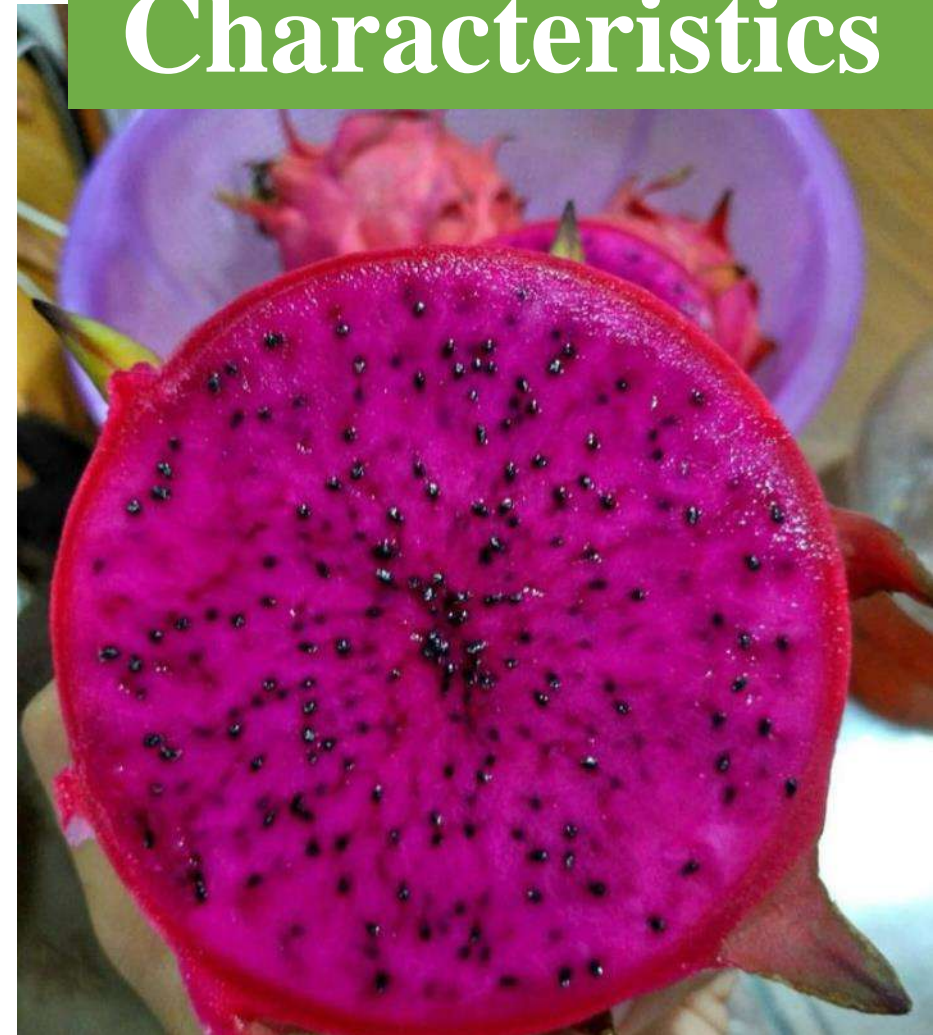

# Nutritional Characteristics

There are two different species, *Hylocereus Undatus* which has white flesh, and *Hylocereus Polyrhizus* which has red flesh. The flesh of the red dragon fruit is sweeter than white flesh varieties and has a beautiful vibrant red to purple color.

As with other fruits, you can keep these out at room temperature for several days so long as they're uncut. Once cut, you should eat your dragon fruit immediately or store it in the fridge for a day or so until it begins to brown. If you'd like to slow the ripening of uncut dragon fruit, place it in a plastic bag and store it in the fridge. They're prone to absorb flavors and odors from other foods, so the baggie will help prevent this.

# Technical Data

Denomination	: Fresh Dragon Fruit / Pitaya / Pitahaya
Scientific Name	: Hylocereus undatus
Tariff Heading	: 08109090
Origin	: Indonesia
Cultivation Type	: Organic & Conventional
Weight	: 250 – 600 grams per piece
Taste	: Sweet, delicate taste. It is described as Cross between kiwi and pear, Or kiwi and watermelon.

# Production

# Description

Durian can be export as Whole Fresh Durian, size from 2-6kgs with at least 3 lobes to maximum 6 lobes.

Depends on destination regulation on the chemical and pesticide restriction. Fresh Whole Durian can export both sea & air. The ripeness level is depending on transit time using for transport to destination plus shelf life for sell at destination. Durian can also be export as Peeled Fresh Durian in retail package. This is more convenient than Whole Fresh Durian which is sophisticated to whom that have less knowledge of how to notice the ripeness level (softness of the Durian meat).

# Nutritional Characteristics

Durian is an exotic fruit in many parts of Southeast Asia, and is often called the king of fruits. It is also widely celebrated for its long list of health benefits, which include the ability to boost your immune system, prevent cancer and inhibit free radical activity, improve digestion, strengthen bones, reduce signs of anemia, cure insomnia, prevent premature aging, lower blood pressure, and protect against cardiovascular diseases.

# Technical Data

Denomination	: Whole Durian / Peel Durian

## Flesh of Kopyor Coconut

# Description

Kopyor coconut is a coconut plant that undergoes natural genetic mutation and is an abnormal fruit. In kopyor coconuts, the flesh of the fruit does not adhere to the coconut shell but is mixed with coconut water.

Kopyor coconut is actually a regular coconut that undergoes abnormalities during its growth and development. At first glance, the physical appearance of kopyor coconuts is not as attractive as normal coconuts. The inside appears lumpy, mixed up, and messy, in other words, unattractive.

The term "kopyor" itself, according to some people in Central Java, is called "garoh" and is a genetic abnormality in coconuts. The characteristics of this abnormality are soft fruit flesh that detaches from the shell, a small amount of coconut water, and a distinctive aroma different from regular coconut flesh.

# Nutritional Characteristics

Kopyor coconuts are highly preferred because they have a refreshing taste when served as a beverage. They are also used as an ingredient in cakes, both dry and moist, and as raw material for ice cream.

The flesh of kopyor coconut contains antioxidant compounds and lauric acid, ranging from 37.93% to 51%. Lauric acid is easily digested and absorbed by the body, functioning as an antibacterial, anti-cancer, and energy booster.

Rich in nutrients. Kopyor coconut contains many important nutrients such as vitamin C, vitamin B, iron, calcium, and potassium. In one kopyor coconut, there is 360-600 ml of coconut water and 350-450 grams of kopyor coconut flesh.
