When solving multiplications you can draw groups of number you are multiplying. For example for  $4 \times 2$  you could draw 4 groups of 2 together. We would also say this as 4 lots of 2.

Then you can count how many you have altogether. So  $4 \times 2$  would be 8.

For  $3 \times 5$  you would draw 3 groups with 5 in each group to show 3 lots of 5. Then count how many there are altogether so  $3 \times 5$  would be 15.

$3 \times 2 = \underline{\quad}$

$6 \times 2 = \underline{\quad}$

$4 \times 2 = \underline{\quad}$

$2 \times 5 = \underline{\quad}$

$4 \times 5 = \underline{\quad}$

$8 \times 5 = \underline{\quad}$

$5 \times 10 = \underline{\quad}$

$3 \times 10 = \underline{\quad}$

$7 \times 10 = \underline{\quad}$

Which is more? Circle your answer and explain how you know.

$7 \times 2$

or

$3 \times 10$

Solve these word problems. You could draw pictures to work it out.

Miss Stone has 4 tables in her class room. 5 children sit on each table. How many children are there altogether?

A flower has 6 petals on it. How many petals will there be on 10 flowers?

There are 8 doughnuts in a bag. How many doughnuts are there in 2 bags?
