Quarter Dome Safety Mirror 80CM ES-W90D

This acrylic quarter 800mm (32") diameter safety mirror has a viewing distance of approx. 5 meters. The shatterproof lightweight acrylic ensures easy installation direct to ceiling or can be suspended. Our dome safety mirrors are also available as quarter, half or full size.

Our quarter dome mirrors are excellent corner security mirrors to see around blind spot areas, down aisles and corridors. They are a 90 degree mirror most commonly used in warehouses and industrial facilities as a corner security mirror for two-way intersections to avoid forklift accidents. Offices and hospitals needing a corner safety mirror for hallways and patient rooms prefer a quarter dome mirror as it allows for safe navigation and enhanced visibility.

SIZE:

800mm
