

Mange elever oplever, at matematikken er i vanskeligheder.

Elever som oplever, at matematikken er i vanskeligheder, har brug for genkendelighed og gentagelser.

Jeg har lavet dette redskab "Domino spil" til eleverne hvor matematikken er i vanskeligheder.

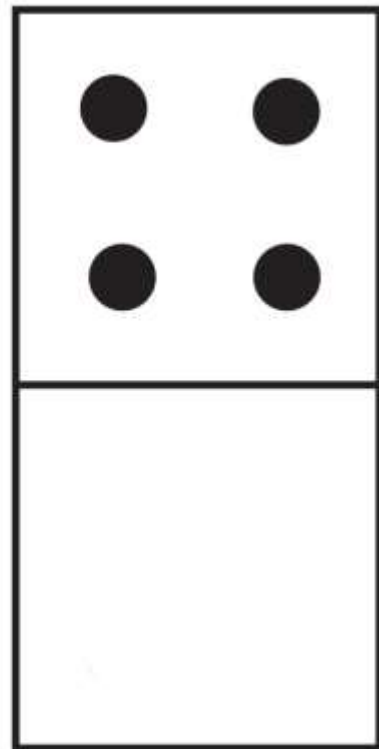

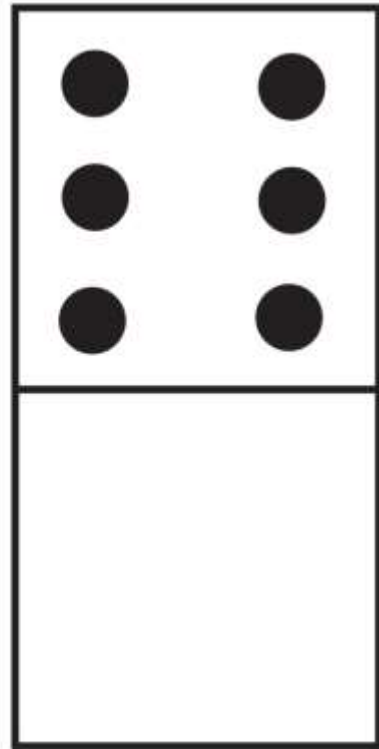

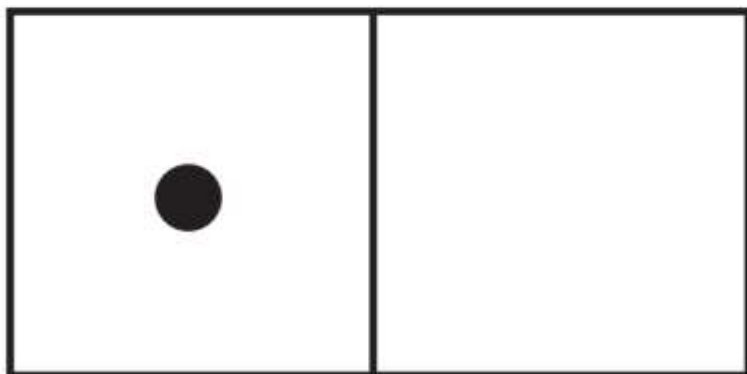

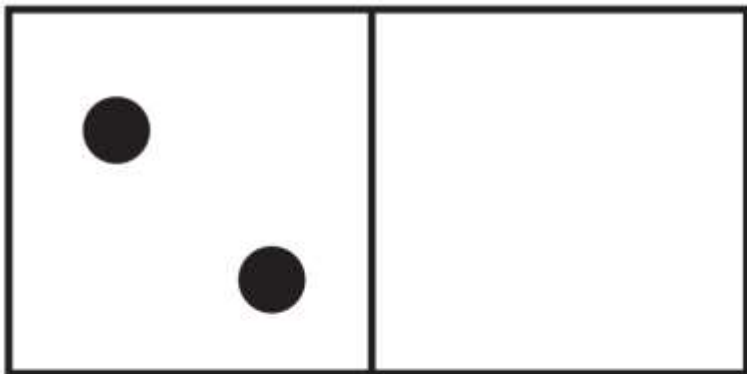

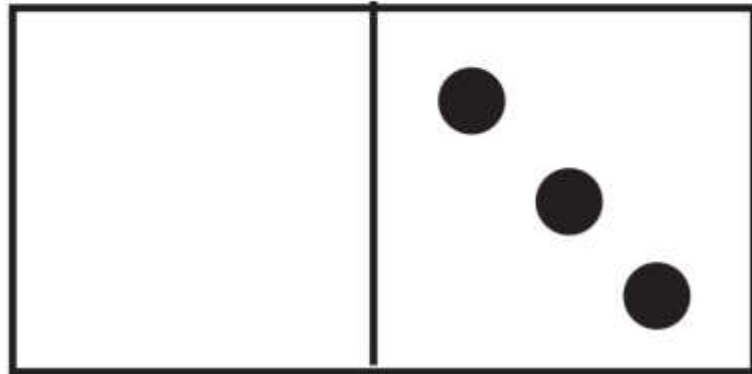

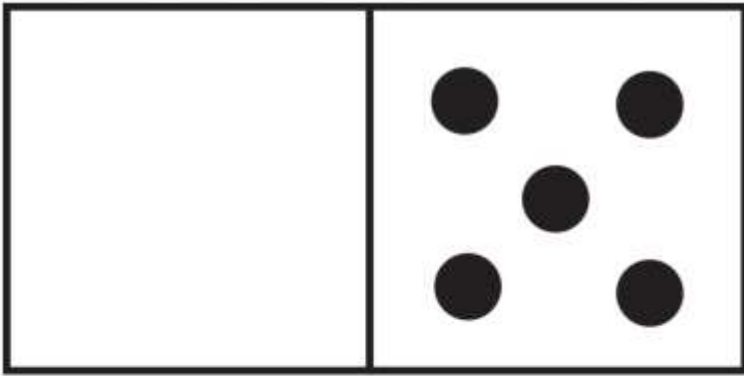

Materialet "Domino spil" skal hjælpe eleven med at få udvidet sin talkendskab, samt starte med at få en forståelse af at lægge to tal sammen.

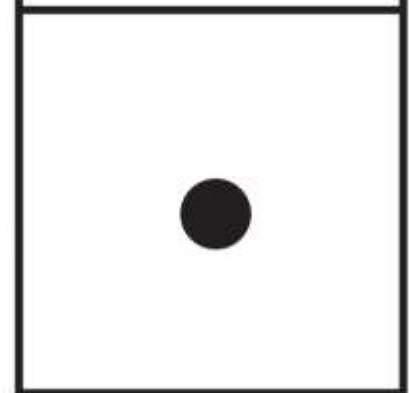

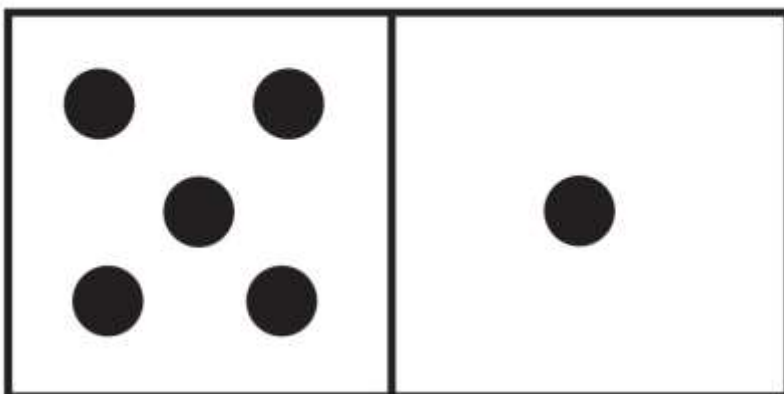

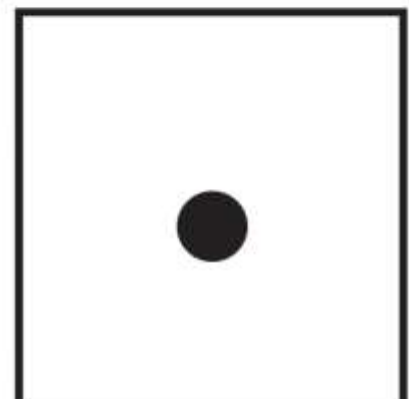

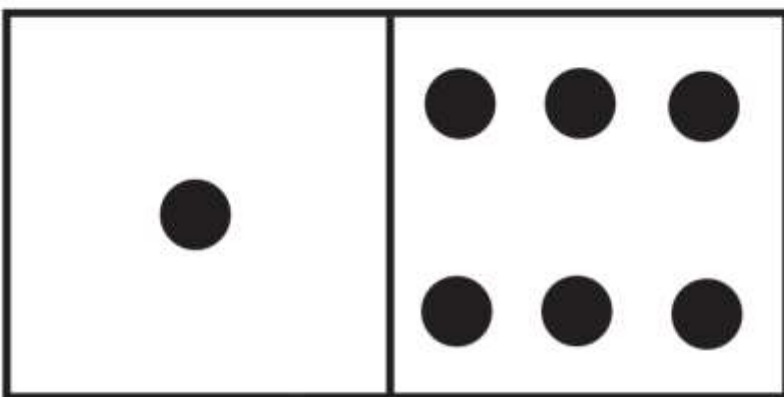

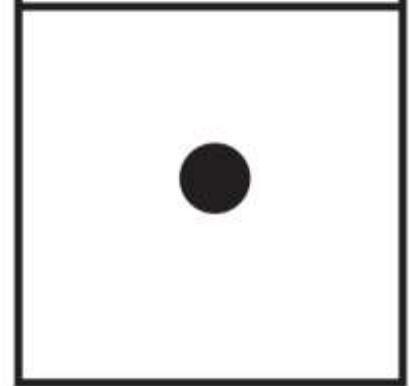

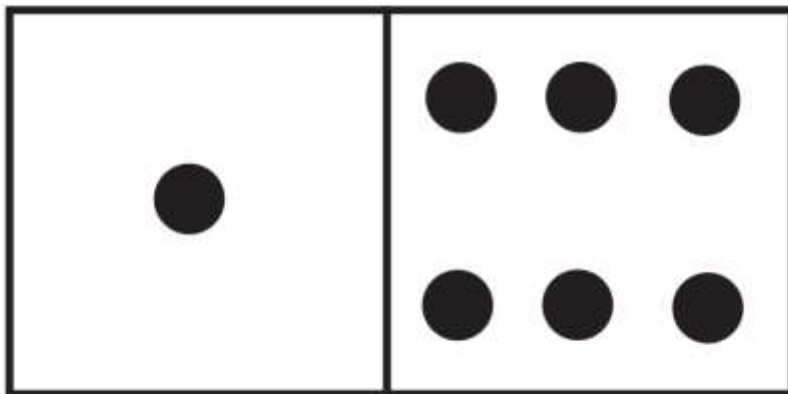

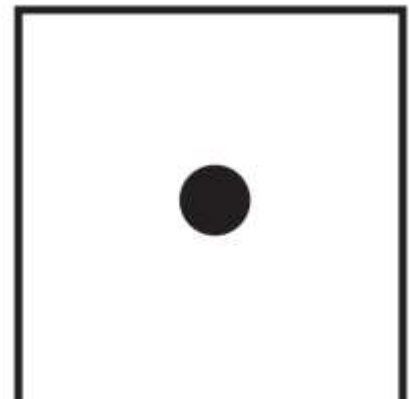

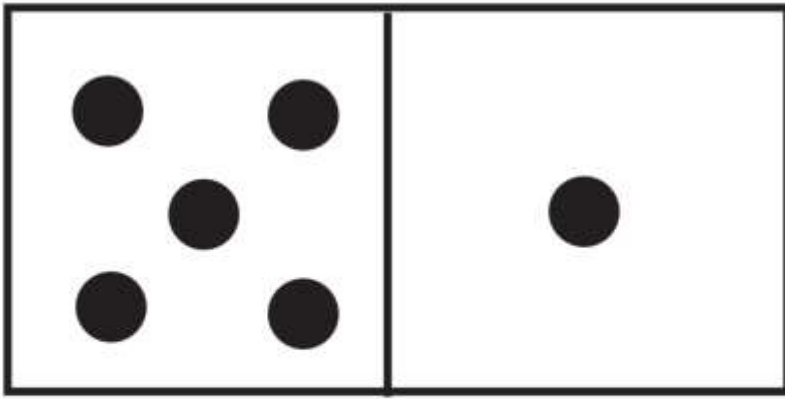

Spillet kan både spilles alene og i par.

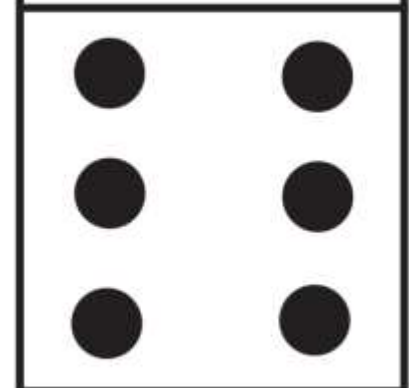

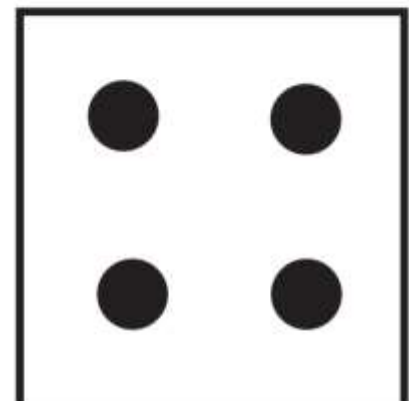

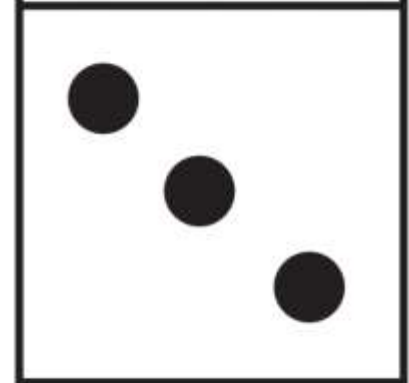

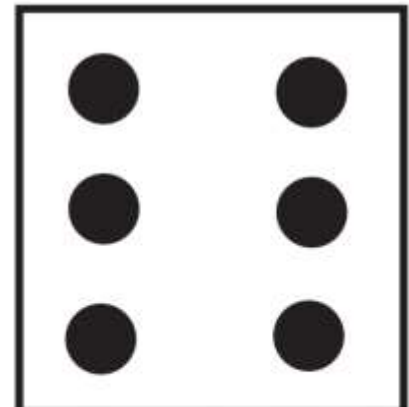

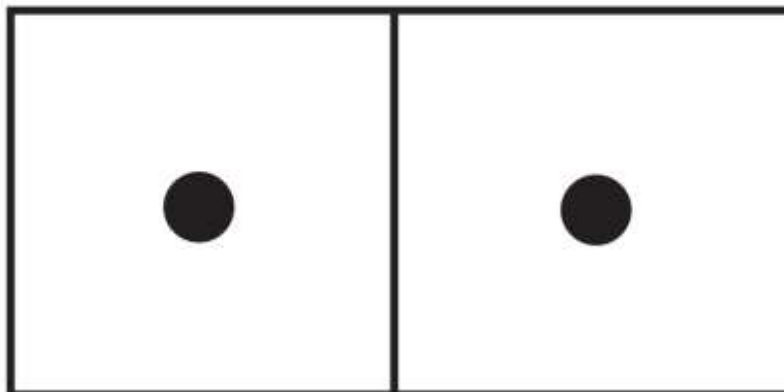

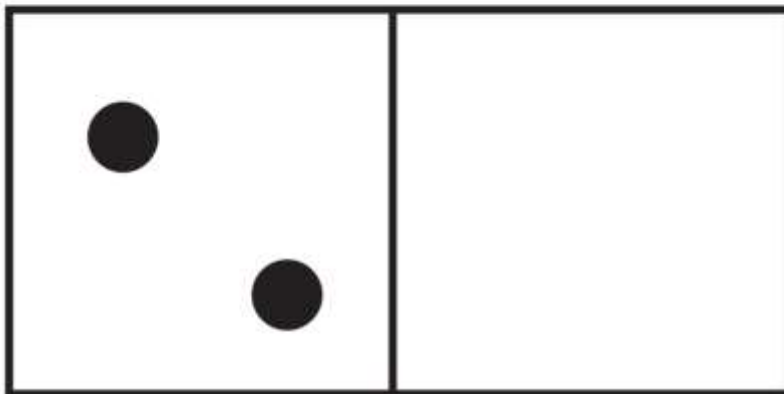

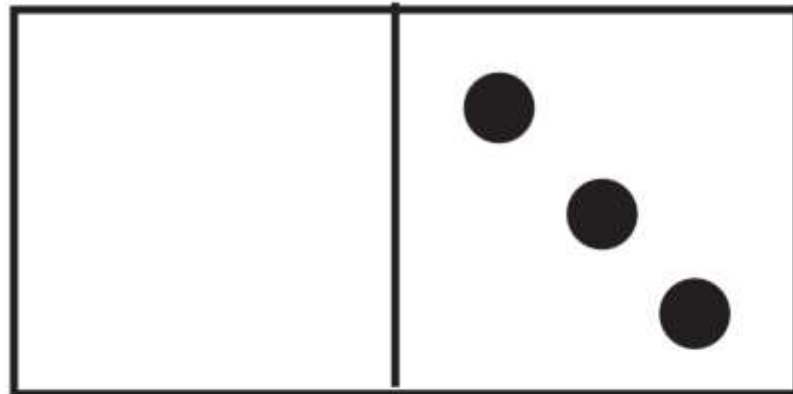

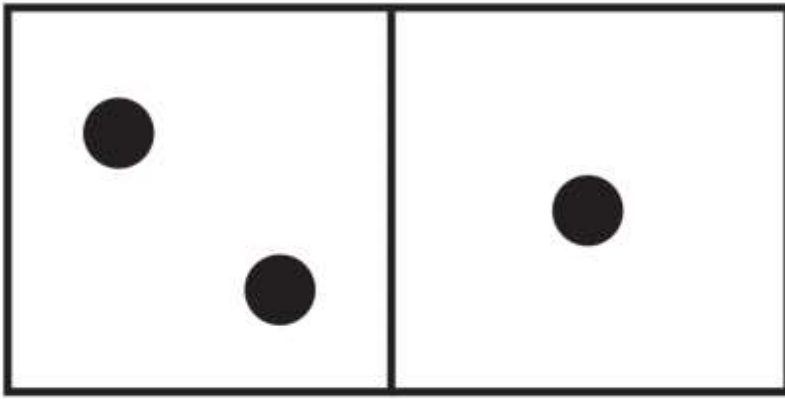

Rigtig god fornøjelse.

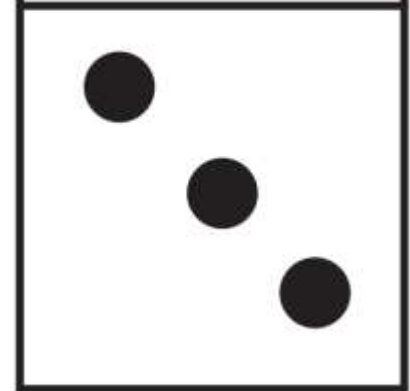

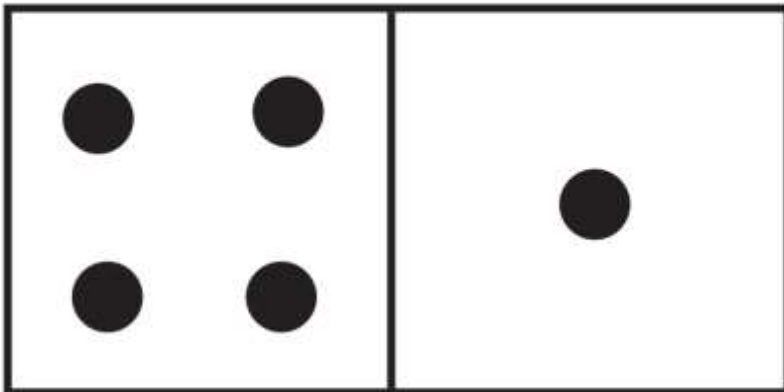

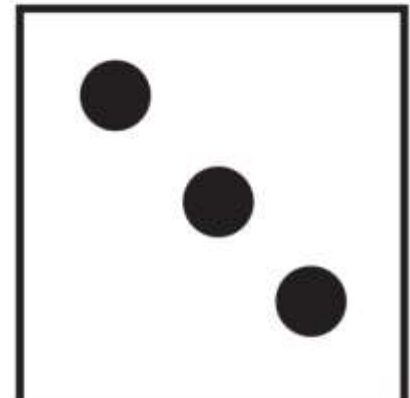

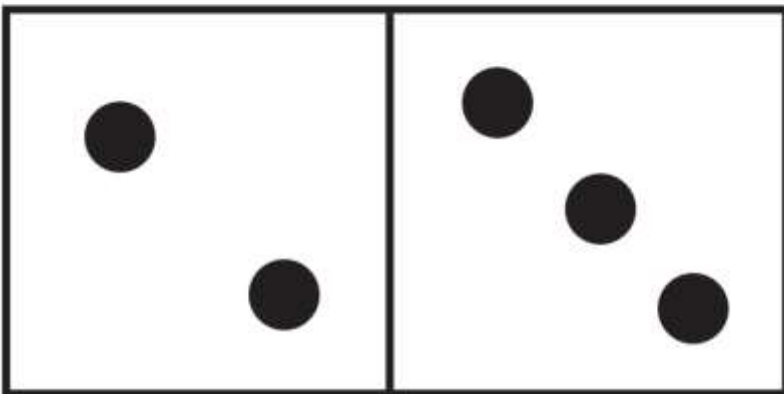

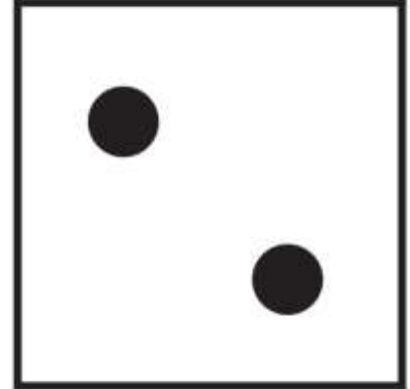

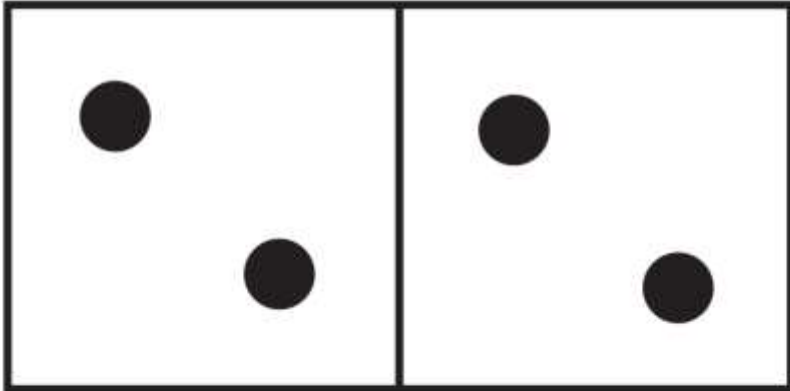

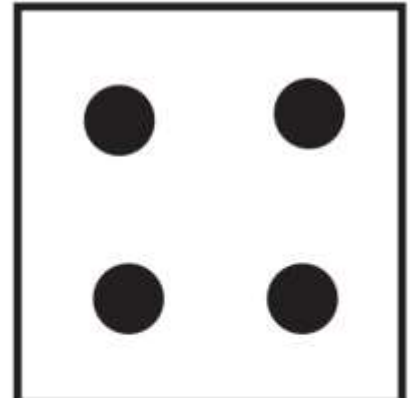

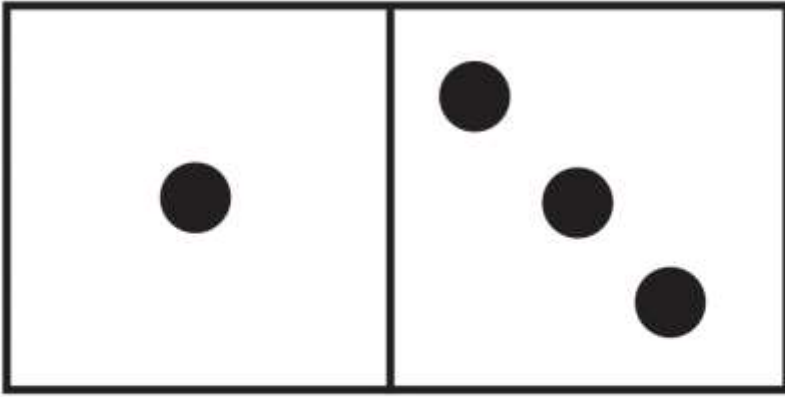

## Regler:

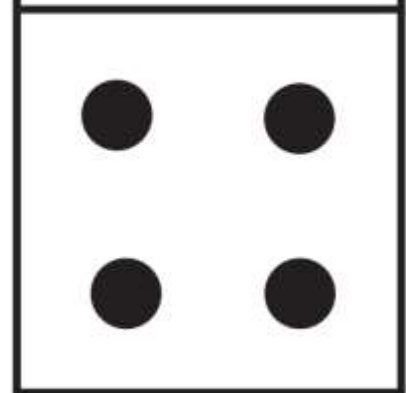

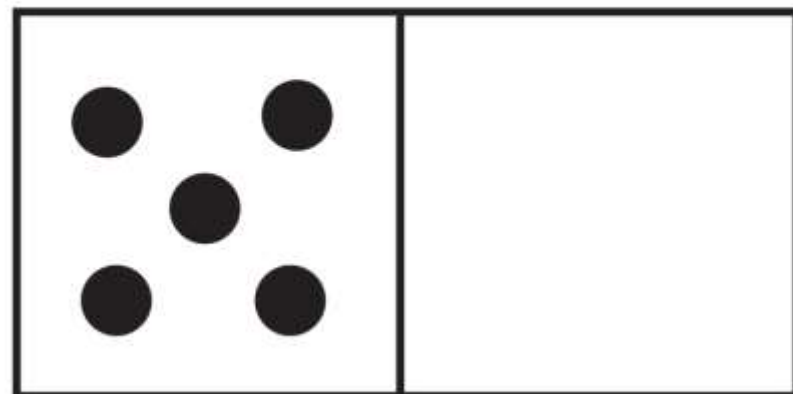

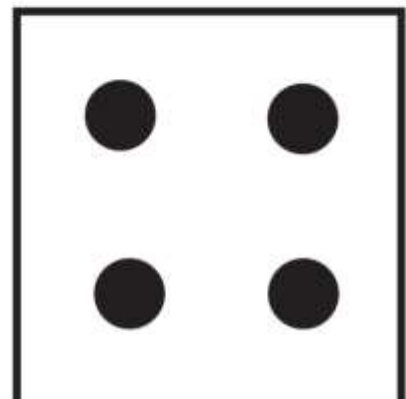

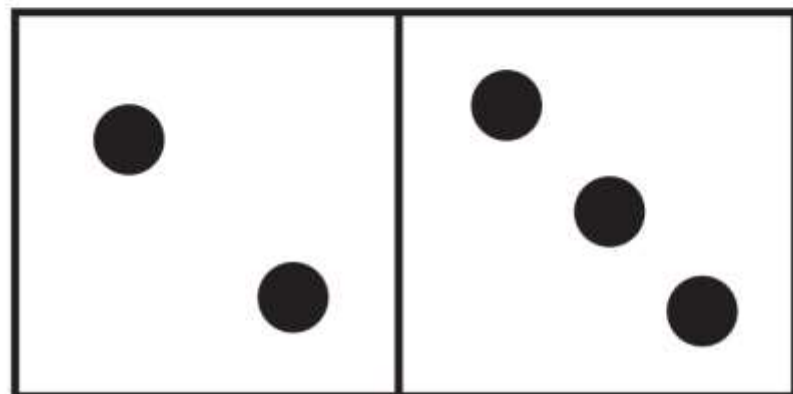

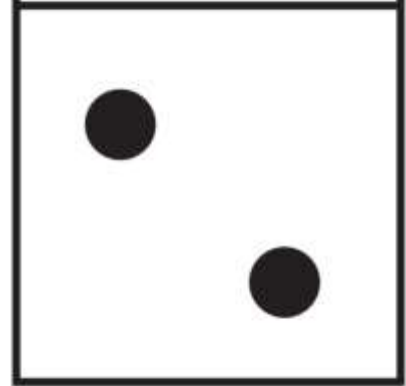

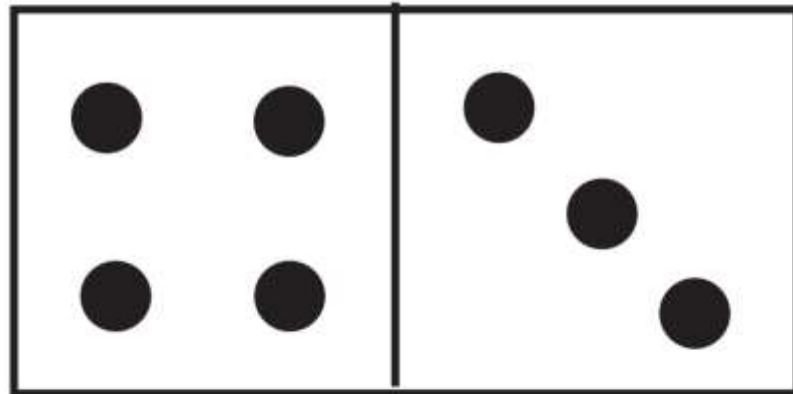

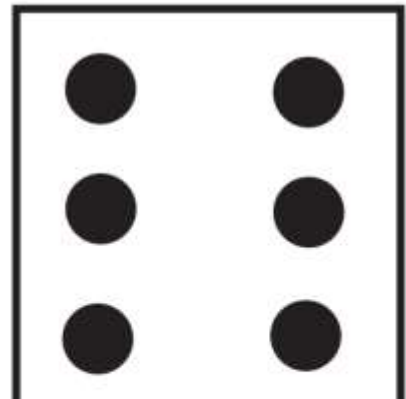

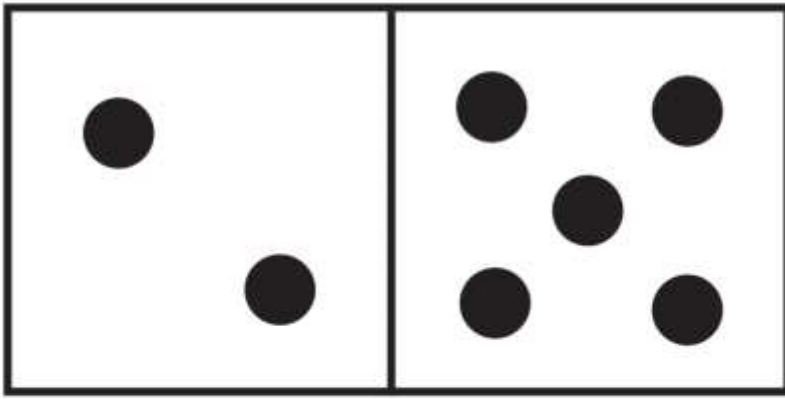

- Eleven sætter talkortene op i rigtige rækkefølge
- Eleven trækker et domino kort fra bunken
- Eleven tæller antal øjne på domino kortet
- Eleven finder herefter det talkort der passer til antallet på domino kortet
- Eleven trækker herefter et nyt kort
