Top News

We are thrilled to announce the formation of a groundbreaking partnership between three leading companies in our industry: viggo-hansen, Provak, and Piab. This collaboration marks the beginning of a new era of innovation, efficiency, and shared goals, bringing significant benefits to our customers and partners.

Unique Powder-Handling Machines for the Industry

A new feeding system for **nicotine pouches** and **snus** has been developed. Designed to seamlessly integrate with all existing packing machines, our innovative solution combines advanced vacuum technology with precision rotary screws.

Specialized Solutions for the Nicotine Industry

The industries require a high level of cleaning, due to changing of flavors in the product. Efficient cleaning of equipment and accessories has been an important task to solve. With this powder feeding system, daily cleaning and cleaning between product change can be done within a few minutes. All items there needs cleaning, can be dismantled without any use of tools. Everything is designed in a way so cleaning can be done as quick and easy as possible.

Powder handling

Machine Highlight

- Ensure precise dosing and mixing of ingredients
- Maintain the highest standards of hygiene and product safety
- Offer robust and reliable performance for continuous operation

Innovative New Product Line Launched

Benefits with new vacuum feeding line

- Easy change to another product flavor
- Small machine footprint
- Easy cleaning
- Optimized production time
- More stable production
- Better flow in production

Expertise and Experience: With many years of experience within this industry and process, we have developed a understanding of the challenges you might have in your production process. Our team of experts is dedicated to providing you with the best possible solutions tailored to your specific requirements.

Complete vacuum line

If you want to hear more about the new feeder system, then don't hesitate to contact Viggo Hansen A/S or Provak Aps.
