

Identify, Assess, & Mitigate Risks in Your Oracle Fusion Environment

Configuration Risk Assessment

Configuration Risk Assessment by Samkit is a powerful solution designed to evaluate and mitigate risks in Oracle Fusion environments. It helps businesses maintain compliance, enhance security, and improve operational efficiency by identifying misconfigurations and vulnerabilities in system settings.

Key Features

Automated Risk Assessment – Scan and analyse Oracle Fusion configurations to detect potential risks.

Compliance & Security Checks – Ensure compliance with best practices, security standards, and industry regulations.

Detailed Risk Reports – Get comprehensive reports with risk levels, impact analysis, and recommended actions.

Customizable Risk Parameters – Tailor risk assessment criteria to match your organization's needs.

Continuous Monitoring – Track configuration changes and mitigate risks proactively.

User-Friendly Dashboard – View risks and recommendations in an intuitive interface.

Who Should Use It?

- Internal Audit Team
- IT Security Teams
- System Auditors
- Compliance Officers
- Oracle Fusion Administrators
- Risk Management Professionals

Benefits

- **Reduce Configuration Risks** – Identify vulnerabilities before they impact operations.
- **Enhance Compliance** – Maintain adherence to regulatory and security frameworks.
- **Improve System Performance** – Optimize configurations for better efficiency.
- **Save Time & Effort** – Automate risk assessment and minimize manual checks.
- **Gain Actionable Insights** – Make informed decisions with clear recommendations.
