CADELER

Cadeler is a Danish offshore wind installation company specializing in the transportation, installation, and maintenance of offshore wind turbines and foundations.

The company operates one of the industry's largest and most advanced fleets of jack-up installation vessels, supporting major renewable energy projects worldwide

At this event, Cadeler will share insights into how the company operates at the intersection of entrepreneurship and ship ownership.

They will present concrete examples of how large-scale offshore wind projects are managed from start to finish. Participants will also gain valuable insight into both the operational and design aspects of Wind Farm Installation Vessels.

Best regards,

Søfartsteknisk Forening
