DFDS

Registration:

Via calendar invitation from the
Secretariat

The venue is **OPEN** but only
for invited and registered guests
of members. Please inform the
secretariat about name and
email of any guest invited.

Countless are the projects around the green transition
in shipping, where only marginally few are realized.

Come and hear Jens P. Buchhave, CEO, Terntank rederi A/S talk
about how a small shipping company not only dreams about the
future but also realizes it together with the cargo owners.

Jens will talk about M/T Tern Dal and her two sisters and their
design with methanol prepared main engine and large diameter
propellers, Wind Assisted Propulsion System, peak cutting
battery pack, shore power with more.

In addition, Jens will talk about the decision-making process for
the newbuilding order, as well as the construction phase itself.
And finally, briefly about the experiences from the previous
visionary newbuildings.

The Board is pleased that Jens and Terntank Rederi will share
their experiences, as sharing experience is an important factor
for us to move forward with the energy transition; a transition
that is important, not least for Europe, in these changing times.

Come and listen, ask questions and share your experiences with
Jens and the rest of us.

After the presentations, there will be time to network and as
usual, there will be sandwiches and a little drink.

We hope to see you in late May at this interesting and highly
relevant venue.

Best regards.
Søfartsteknisk Forening
