

Guidelines (Hidden slide)

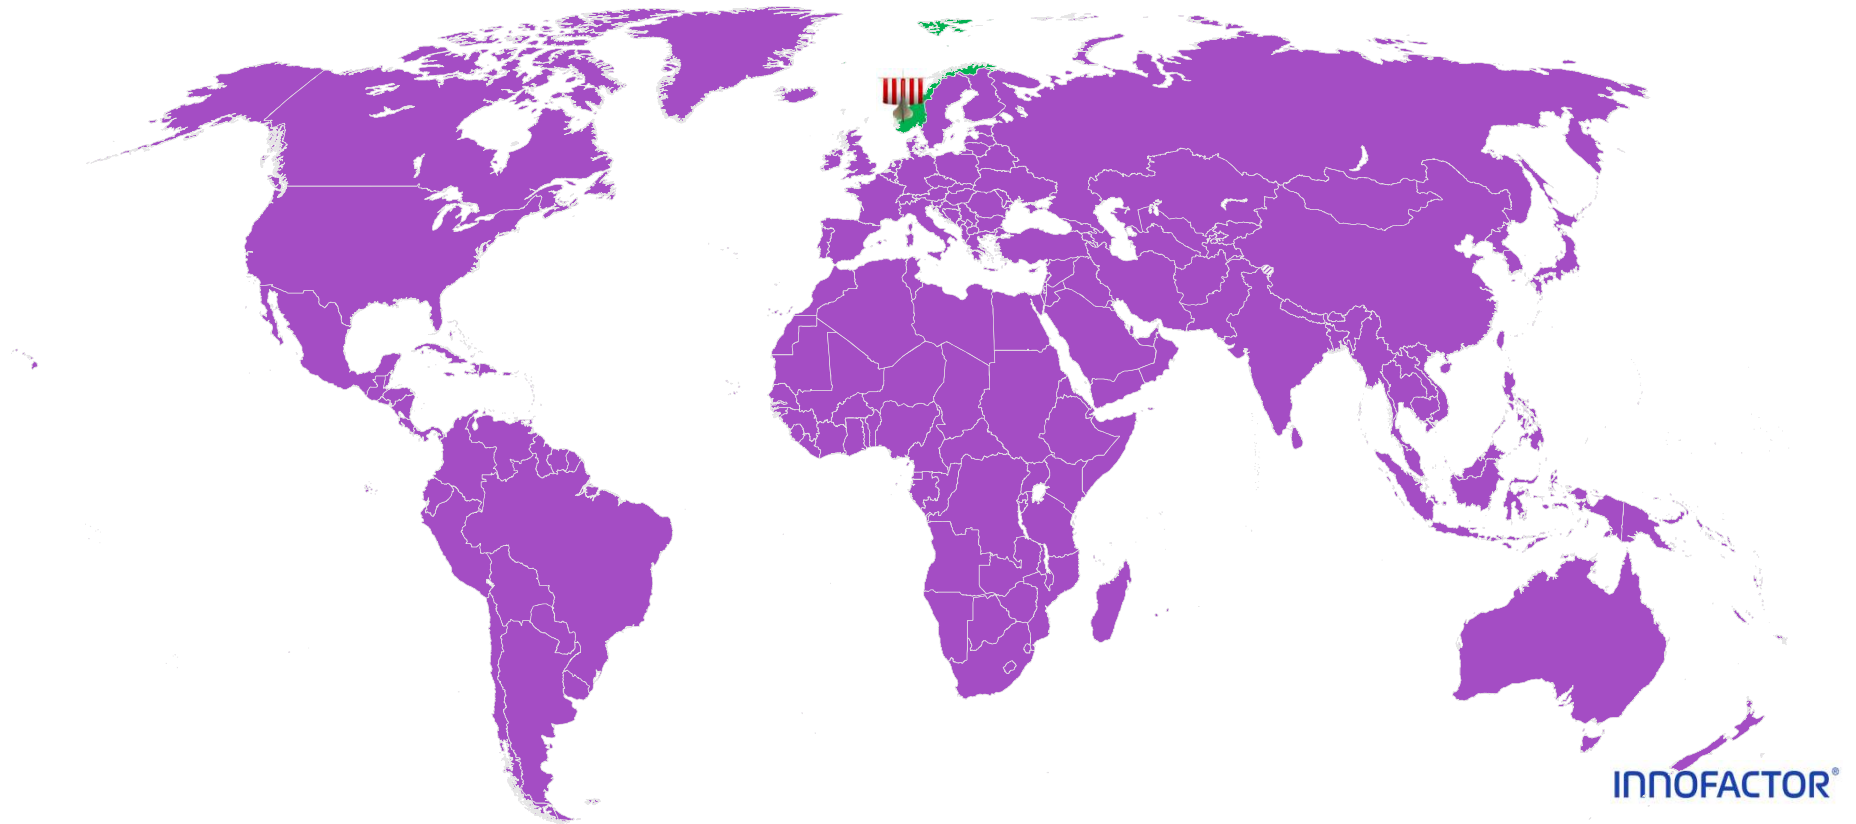

- Add new slides on the left pane – then right click on the slide on that pane and choose a suitable layout. Several different layouts are provided.
- Above is the title area, this is the content area for text. Click on it, or the logos to add content. Expanding this area or moving it around is generally considered a "bad practice".
- Users can insert images in content area, or anywhere around it - logo must be respected. If, however you add an image that expands on logo, please place a white or blue logo on top of that image.
- Header font should be Norwegian, other text should be Arial.

Migrating OneDrive for Business to OneDrive for Business

Updated 1 month ago

Follow these best practices when running a OneDrive for Business to OneDrive for Business migration.

Make sure your users and their OneDrive for Business exist in your destination

Sharegate doesn't migrate the users, it will search for the available users at the destination, and then migrate the data from the source OneDrive to the destination OneDrive for that user. So the users must be provisioned in the destination Active Directory before anything else is done.

Once the users are in your destination Active Directory, you'll need the OneDrive for Business provisioned for each one of them. If you don't know how to do this, you can consult this article: <https://technet.microsoft.com/en-ca/library/dn800987.aspx>

You can also provision all destination OneDrive for Business using this Sharegate Powershell cmdlet:

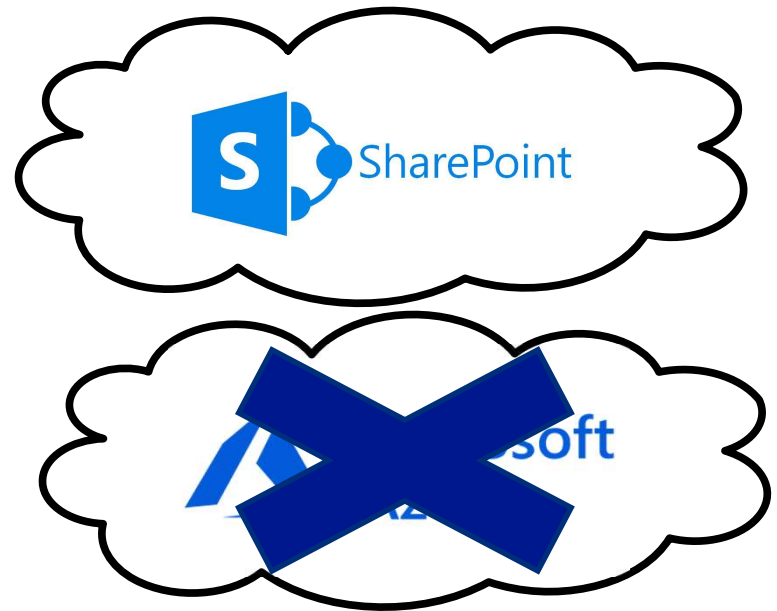

```
$tenant = Connect-Site -Url https://mytenant-admin.sharepoint.com -Browser
$csvFile = "C:\CSVfile.csv"
$table = Import-Csv $csvFile -Delimiter ";"
foreach ($row in $table)
{
  Get-OneDriveUrl -Tenant $tenant -Email $row.Email -ProvisionIfRequired -DoNotWaitForProvisioning
}
```
