**Charging: 5V USB**

Orange Solid = Charging

Green Solid = full battery

Green Flashing = Street mode

Pink Flashing = Race mode

Orange Flashing = ca 2 hr riding left

Orange Flashing & 4 Beeps = ca 0,5 hr riding left

Blue Solid = Pairing mode (Fork sensor pairing)

No led = Sleep mode or OFF

Red = Fault

**Switch On or Off:**

Press the button 3 times quickly

When turning on, you get a beep, a quick red, then quick green and then the mode colour flashing fast for about 30-45 seconds. And after that, mode colour is flashing about every other second, depending on GPS accusation.

If not used for 15 min it goes to sleep mode.

It will restart & flashing when you move the vest.

**Switch between Street and Race mode via a**

3-second push, 2 times:

1. turn it ON by pressing the button 3 times

2. it will be in same mode as last used.

3. to change mode, hold the button for 3 seconds to get the solid blue 😊 pairing mode)

4. hold the button again for 3 seconds and it will switch from green to pink or pink to green, depending on what mode it was originally.

5. the new mode color will flash for 45 seconds, and then go dark, until you move the vest again
