

Metallized Polypropylene Capacitors for AC / Impulsional Applications

Type KPS ... dv

Applications

- Protection and commutation
- Electronic Power
- Impulsional fields needing intensive du/dt
- High Current
- Switching power supplies
- Tuned Circuits

Main Characteristics

- Dry-film technology
- Nominal Voltage: 800 VDC to 1300 VDC
- Climatic category: 40/085/56
- Low ESR, ESL

Design

- Metallized Polypropylene film and foil
- Wrapped in plastic sleeve
- Terminals threaded inserts M6 or M8
- Epoxy resin end-seal (UL-V0)

1.0 Rated Values and Operational Data

DC	Nominal Voltage U_N [V]	$\leq 70^\circ\text{C}$	800	1000	1300
	Peak Repetitive Voltage U_{cr} [\hat{V}]	$\leq 70^\circ\text{C}$	1200	1600	2000
	Allowable Surges U_s [\hat{V}]	$\leq 70^\circ\text{C}$ 10s/day	1500	2000	2500
	Test Voltage U_T	10s / 23°C	1700	2200	2700
AC	Nominal Voltage U_N	$\leq 70^\circ\text{C}$	400	450	500
	Maximum transitory Voltage U_{max}	70°C	480	540	600

2.0 Capacitance Range

$C_n \Rightarrow$	470 nF	500 nF	1.0 μF	4.0 μF	6.0 μF
800 VDC					
1000 VDC					
1300 VDC					

3.0 Characteristics

			Min	Typ.	Max
Tangent delta dielectric	$\text{tg } \delta_o$	1kHz-100kHz		2×10^{-4}	
Insulation Resistance	R_i [mOhms]	500 V, 1min, 23°C , $C \leq 0.33 \mu\text{F}$	1.0×10^5		
Time Constant $C > 0.33 \text{ nF}$	$R_i C$ [s]	500 V, 1 min, 23°C	33000		
Temperature Coefficient	α_c	ppm / $^\circ\text{C}$		-200 ± 125	
Long term stability	$\Delta C / C$ [%]	23°C , 50% HR			± 0.5

Metallized Polypropylene Capacitors for AC / Impulsional Applications

Type KPS ... dv

4.0 Usage Limits

4.1 Limits of standard current

The upper limit of the standard current is determined by the following:

$$I_{rms} = \sqrt{\frac{1}{T} \int_0^T i^2(t) dt} \text{ et } I_{rms} \leq I_{eff \max}(f)$$

With $I_{eff \max}(f) = I_{eff \max}(10\text{kHz}) \times \left(1 + \frac{f-10}{50}\right)$ for $10 \text{ kHz} < f \leq 30 \text{ kHz}$

and $I_{eff \max}(f) = 1.4 \times I_{eff \max}(10\text{kHz})$ for $f > 30\text{kHz}$

Conditions: $I_{eff \max} \leq 60 \text{ A}_{eff}$ (vis M6)

$\leq 100 \text{ A}_{eff}$ (vis M8), $U(f) \leq U_N(50\text{Hz})$, internal heat $\Delta\theta \leq 15 \text{ }^\circ\text{C}$, $T_{amb} \leq 60^\circ\text{C}$

4.2 Impulse Usage

where t_r , t_d indicate, respectively, the charge and discharge times, and T indicates the cycle time

with $\left(\frac{du}{dt}\right)_N$ defining U_N and $T_{amb} \leq 70^\circ\text{C}$ (see data sheets)

Peak current is limited to $\hat{I}_{cr} [A] = C_N [\mu F] \times \left(\frac{du}{dt}\right)_N$

and

the maximum rise in voltage variation $\left(\frac{du}{dt}\right)_{max} = \frac{U_N}{U_{pp}} \times \left(\frac{du}{dt}\right)_N$

Maximum recurrence of frequency is determined by:

$f_p \text{ max [p.p.s]} = \frac{1}{T} = \frac{I_{eff \max}^2(f)}{I_{1cr}^2 \times t_r + I_{2cr}^2 \times t_s}$ avec $\hat{I}_{cr1} [A] = C_N [\mu F] \times \frac{U_{pp}}{t_r}$

and

$\hat{I}_{cr2} [A] = C_N [\mu F] \times \frac{U_{pp}}{t_d}$

given that $\frac{U_{pp}}{t_r}; \frac{U_{pp}}{t_d} \leq \left(\frac{du}{dt}\right)_{max}$

5.0 Dimensions, shape:

Axial capacitors, with threaded inserts (screws upon request).

D max.	D1	D2	Max. Torque
≤ 60 mm	M6 x 8	15 mm	4.5 Nm
> 60 mm	M8 x 8	20 mm	10 Nm
