

Astro Connector Service Kits for Maintenance and Production

Astro kit containers are constructed of molded plastic, fiberglass or metal depending upon varying applications or customer preference.

- Military aircraft kits
- General aviation kits
- Commercial aircraft kits
- Installation and removal tool kits

Let Astro's experience and in-depth knowledge take the guesswork out of your service kit requirements. It's difficult for you to have all the answers, so Astro has done the work for you. Our research team has years of experience in kit design. Let Astro put that knowledge to work for you!

Astro offers customized crimping tool kits for a wide variety of applications. Many kits are designed for specific aircraft or system maintenance while others cover a particular connector series or other special customer needs.

Kits are not only a convenient way to keep all your tools together, but they keep the information that you require for your connector wiring repair at your fingertips.

Whether you are buying individual tools or complete service kits, Astro is in the connector assembly tool business to serve you and to make your job faster and easier.

Components are contained in foam cavities, for protection and ease of identification. Contents charts, corresponding to each foam cavity, identify components stored in that location.

Each kit contains instruction sheets that detail application and explain how each tool is used. Tool selection sheets further add to the ease of kit use by referencing tool requirements for each connector series covered by the kit. All reference sheets in each kit are coated to protect against the elements.
