Mi-TIC
MINI THERMAL IMAGING CAMERA

MI-TIC THE WORLD'S SMALLEST HIGH RESOLUTION THERMAL IMAGING CAMERA, SPECIFICALLY DESIGNED FOR FIREFIGHTERS.

Argus is an e2v brand focused on designing and manufacturing the highest quality thermal imaging cameras on the market.

The Mi-TIC is a small format thermal imager that can be easily and comfortably held in the palm of your hand. The unique design allows for multiple wear options, and incorporates intuitive and simple functionality.

Offers the highest quality image of any personal style infrared camera

Extremely lightweight - approx 750g (25oz)

Advanced 320 x 240 uncooled sensor (160x120 option available)

Direct temperature measurement (DTM)

3 buttons allows for more functionality than any infrared camera

Super-fast start up time

Temperature and compression safe lithium iron phosphate battery

1 button operation for ultimate simplicity and ease of use

Switch between two application modes (Fire & Search)

The camera provides a crystal clear image with a vast dynamic range and Tri-Mode Sensitivity; extremely high temperatures are visible without whiteout, and at the same time, very low temperature objects such as casualties can be located.

The Mi-TIC was designed to help firefighters do their job quickly and effectively, which is why the unique dual use

docking station was created. The dock charges the Mi-TIC as well as a spare battery, either on your desk top, or in the truck, meaning your camera is always charged up and ready to go.

Argus cameras are designed and manufactured using European-sourced components, allowing the cameras to be available to the wider export market, and are not subject to the USA ITAR controls (UK export controls apply).

WE ASKED FIREFIGHTERS WHAT THEY NEEDED IN A HANDHELD THERMAL IMAGING CAMERA...

- Super-fast 5 second start-up time enabling firefighters to locate dangers quickly
- Lightweight and small enough to sit comfortably in a gloved hand
- Thumb operated on/off switch
- Easy to use – Simplified functions allow effortless image/video capture and download
- No special software required – The Mi-TIC docking station connects straight to your PC via a standard USB connection for easy download and customisation
- Tough and rugged casing
- Large, clear screen
- Charge-up easily – The docking station charges the Mi-TIC and a spare battery
- Replaceable lens – You can replace the lens quickly and easily, on site
- Optional Black Box recording automatically starts from the moment the unit is powered up
- Multiple wear options – Inside a pocket, clipped outside a pocket, clipped to a lanyard or hung around the neck.
- Digital zoom (3 button variants only)
- Customisable start-up screen
- Temperature and compression safe battery
- Use in bright sunlight – The Mi-TIC Sun Shroud shields the screen from sunlight
- Clearly view extremely high temperatures (in excess of 1000°C) without white out, and still pick up low temperature objects

...AND THEN WE MADE IT.

Inside the box

The Mi-TIC in action

Invisible gas detected by the Mi-TIC

A casualty is located using the Mi-TIC

The Mi-TIC can be customised to suit the needs of your team, including upgrades and accessories to ensure you get the most from your thermal imaging camera.
