Hazardous Materials Form - Instructions

These instructions come along with the Hazardous Materials Notification Form. For correct and fast handling of the refurbishment there are a few important things to know when filling in the HazMat Form. It is also in your best interest that this form is correctly filled in and handled

- Please fill in the form in English.
- Please make sure that the form is filled in completely with all the required information, dates and signatures.
- Please fill in the form as detailed as possible. You must give a detailed description of the materials and types of gas, chemicals, biological and other hazardous materials. So even when the pumps are not exposed to any dangerous materials or gases you have to fill in something; for example 'air'.

We trust to have informed you sufficiently; however should you have any questions regarding our refurbishment service, this hazardous materials notification form or any other questions, remarks or inquiries, do not hesitate to contact your nearest AEP contact person.
