

Electrochemical Sensors Application Note 6 EC410 Oxygen Sensor Disposal Instructions

Disposal of the EC410 sensor must reflect that the sensor contains small quantities of an inorganic acid and noble metals. The sensor must therefore be disposed of according to local waste management requirements and environmental legislation.

The sensor must not be burnt as harmful fumes may be produced.

The sensor can be returned to SGX to enable recycling of the noble metal. In this event, there are no special transport requirements for packaging and labelling that need to be met
