

2G/3G/4G/NB-IoT communication

my **AIRGATE IoT Connectivity**

AIRGATE is a one-stop-shop strategic system integrator offering a broad portfolio of standard and customized industrial IoT services. AIRGATE makes it easy and secure to develop and deploy IoT solutions end-2-end in a scalable way, helping industrial companies all the way from identifying the IoT potential to implementation of the IoT solution. AIRGATE provide IoT solutions that, ensure predictable maintenance of industrial assets, reduce downtime in production, optimize processes and workflows as well as support development of new revenues streams.

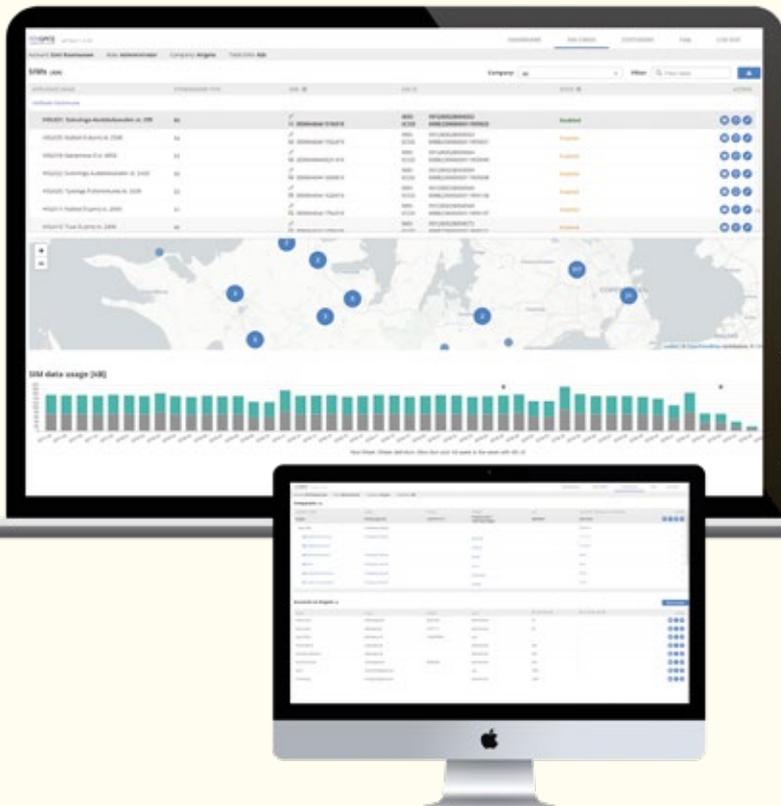

One of the key IoT elements is the connectivity element, and the ability to connect the assets to the Internet. AIRGATE is a virtual network IoT connectivity operator in the field of 2G/3G/4G/NB-IoT telecommunication. AIRGATE provides a scalable and global wireless connectivity solution together with Vodafone or Tele2. The connectivity offering is very flexible and comes with a lot of advanced services specific tailored for global industrial IoT requirements and needs.

What we are proud of

Benefits & Features

With myAIRGATE IoT connectivity management solution it's easy to connect, manage and monitor the IoT deployments. The clouded solution offers full overview of the industrial assets with real-time communication states, positioning, usage, alarms and diagnostics. The platform can be customized and branded to suit any specific business needs globally. In addition, myAIRGATE allows to communicate with any business system through an integrated API

Please do not hesitate to contact Søren Lund, CEO at AIRGATE, by e-mail sl@airgate.dk or by mobile +45 6191 7111 for in deepen information.

UNIQUE BENEFITS WITH AIRGATE IOT CONNECTIVITY SOLUTION

1. One-stop-shop SIM solution (SIM card/SIM platform/gateway)
2. Revenue Share Model
3. Setup for resale to distributors and end-customers
4. Possibility of customer branding of platform and SIM cards
5. Very high security end-2-end
6. CE approved gateway partner globally - Industry 4.0 cert.
7. Same competitive prices in +75 countries
8. Simple and scalable rollouts
9. Integration with customer HW/SW

STATE OF THE ART AIRGATE IOT CONNECTIVITY FEATURES

1. Self-activating SIM card with 100 Kb free test usage
2. Global SIM card from Vodafone/Tele2
3. Consumption control and IMEI lock with e-mail alarms
4. Flexible pricing models - only two price plans
5. Positioning of SIM card on world map
6. Overview of SIM cards/gateways installation
7. Basic SIM card diagnostics for troubleshooting
8. Billing reports with excel billing extract
