

# Airgate File Manager

Airgate File Manager is a software solution that makes development and testing of UR programs and URCaps easier. Airgate File Manager makes it possible to lock and unlock saved installation, program and script files and gives easy access to the Polyscope log file and the system-out log for all installed URCaps.

## Avoid loss of important files

When developing and testing a project it is easy to accidentally overwrite or delete a file, possibly resulting in a loss of valuable details. This is especially the case when multiple people are working on the same project. With Airgate File Manager you can easily lock and unlock saved installation and program files, which prevents them being deleted or overwritten in the development process.

## Security

If you want to control who can lock and unlock files. Airgate File Manager comes with the possibility to enable password protection. You can easily enable and disable the feature and change the password directly in the URCap.

## Easy access to debug logs

Airgate File Manager gives direct access to the Polyscope console log, and to the system-out log. If any of the installed URCaps have prints to system-out they will be visible in the system-out log. This makes development, testing and troubleshooting of URCaps a lot easier.

## Simple and user-friendly solution

Airgate File Manager is easy to download and install, and it features a user-friendly URCap.

For purchase contact us at [info@airgate.dk](mailto:info@airgate.dk). The price is €299 per robot for a full license.
