AlarmPeople

Integration of elevator and emergency Calls

Efficient response systems that ensure instant connection between critical communication channels. When an emergency occurs, fast and accurate communication is essential. Integrated alarm systems ensure all calls are received and handled correctly.

By combining elevator alarms and emergency calls in one intelligent platform, companies can optimize their response handling and reduce waiting times. Operators receive real-time data and automated alerts, enabling every incident to be handled quickly, efficiently, and with full traceability. This integration ensures a safer and more reliable alarm experience for both users and operators.

AlarmPeople offers SBN Cloud with modular solutions that integrate all types of emergency calls and elevator alarms into one system. The platform ensures all alarms are registered and prioritized correctly, enabling operators to respond quickly and effectively – while giving users maximum security.
