

ASAC TRIAL

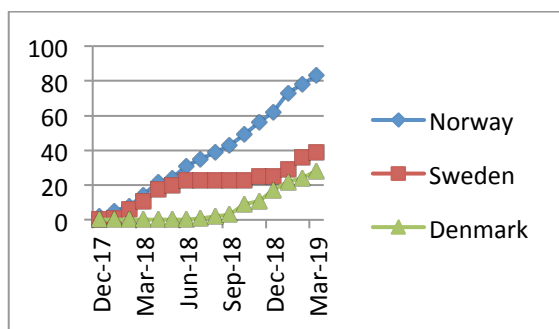

Scandinavian Livermet Study

NEWSLETTER

-April 2019

Inclusion

We have had good inclusion of patients since January. The inclusion reached 150 patients before Easter holidays. We are catching up with the anticipated inclusion rate. The aim is still to include 20 patients per month. We just want to remind everyone to screen all patients referred for liver resection so we don't miss any eligible patient.

SweLiv

We presented the ASAC trial at the annual SweLiv conference in Stockholm. We all agreed that we have to keep the up the pace

and aim to include 20 patients per month in order to reach the goal of 800 patients. The Swedish team will discuss at the tumour board meetings if primary tumour can be operated before livermets in order to include more patients. Furthermore, they will write a proposal for funding of study nurses in Sweden.

Web

The trial webpage asac.no is continuously updated.

Happy
Easter
