

ASAC TRIAL

Scandinavian Livermet Study

NEWSLETTER

-December 2020

COVID-19

We hope everyone is doing well during this special time. The inclusion rate during 2020 has been low and mirrored the side effects of the pandemic. We hope the situation will be better in 2021 when the vaccination program starts, and we can pick up the pace again.

Inclusion

We are now very close to have reached **400 included patients**. Halfway to a total of 800.

We sincerely request you to keep up the good work and include alle eligible patients (*CRC liver mets treated with resection or ablation and not using ASA or anticoagulants*).

We have now added a new "button" in eCRF where you can tick if the patient is treated with resection, RF/MW ablation or a combination. This will be valuable data when we will analyze the results.

Study medication

Change in procedure kit-allocation

Previously, kit allocation has taken place by allocating one kit number per patient for the entire study period. It has now been changed in Viedoc. **The patient will now get a new kit-number every time they need new medication.**

Batch# XB1901 will expire in March 2022 and we want to use as much as possible of this batch before we introduce the new batch. For each site, please check that you have enough medication for existing and new patients if new kit numbers are allocated. If you have any questions, any problems with kit-number allocation or need to discuss the amount to order, please contact Cecilie Moe at cecmoe@ous-hf.no or +47 41541987 (Clinical Trial Unit, OUH).

Please do not hesitate to contact us if you have any questions! We are always available on phone or email.

We wish you all a Merry Christmas and a happy new year ☺
