

**Study medication and change in procedure kit-allocation**

Previously, kit allocation has taken place by allocating one kit number per patient for the entire study period.

The last six months, patients have been receiving refill of kits through manual allocation by Cecilie Moe at Oslo Clinical Trial Unit. In July 2021, a new functionality will be implemented in Viedoc. A new kit-number will be generated every time a patient needs new medication. Please note that the expiry date on the current study medication Batch# XB1901 is March 31<sup>st</sup> 2022.

We want to use as much as possible of this batch before starting on the new batch. The remaining kits from Batch# XB1901 will be included in the new allocation functionality until expiry date. The new batch of study medication has been produced, and will be shipped to all sites in July.

If you have any questions, any problems with kit-number allocation, or need to discuss the amount to order, please contact Cecilie Moe at [cecmo@ous-hf.no](mailto:cecmo@ous-hf.no) or +47 41541987 (Clinical Trial Unit, OUH).

**Signing the eCRF in Viedoc**

All data has to be signed by the Investigator. Signing can be done on form, visit, or study level through the signing console. All investigators have the permission to sign patient forms. You may find more information regarding signing here:

**Meetings**

To assure good communication between the study sites, we have started with web-meetings every month. It is a nice way to get to know each other. Let us know if you have any topics you want to discuss. We will arrange the next meeting in august.

**We wish all our colleagues a happy summer holiday!** 🌸
