

COVID-19, or novel coronavirus, is particularly dangerous because people who carry the virus, which is highly infectious, may show no symptoms and can transmit the virus for up to 7 days or more. **Transmission** is most common through droplets expelled from a carrier through sneezing or coughing. However, COVID-19 can be transferred from any infected person to surfaces made from a variety of materials—where it can remain viable for hours to days.

Cleaning of visibly dirty surfaces followed by disinfection is a best practice measure for prevention of COVID-19 and other viral respiratory illnesses in businesses, households, healthcare facilities, and community settings.

Beta Sanitise Ltd updating its protocols for clients amidst the spread of COVID-19 Coronavirus.

- Certification (when required)

Some fact on Infection Control Cleaning Services

Health & Safety: We will carry out Risk Assessment on the site before we commence work. Recommended PPE will be worn. We shall abide with necessary laws and regulations.

Emphasis will be placed on Touch Point Surfaces. That is those areas or items that are touched frequently by multiple people. Such as computer keyboards & mouse, telephone handsets, light switches, doorknobs, push button, Conference Room: door handles, chair armrests tap handles, drawer handles and other high-contact areas are some of the most likely places to pick up viruses and bacteria. Our service clean and disinfects those areas, breaking the chain of transmission and helping to reduce the spread of infection.

Envirosafe Virus & Bacteria Eliminator, which we use as chemical disinfectant is environmentally safe, dual-action pre-cleaner and sanitiser. We'll safely clean and kills harmful bacteria, viruses, and odours. Thus, function as Anti-microbial, anti-bacterial, anti-viral and anti-fungal.

THE **ACTIVE INGREDIENTS** IN ENVIROSAFE VIRUS & BACTERIA ELIMINATOR HAVE BEEN TESTED AND SHOWN TO BE EFFECTIVE AGAINST ENVELOPED VIRUSES, OF WHICH CORONAVIRUS – AND MORE SPECIFICALLY THE STRAIN COVID-19

Fogging: Ultra Low Volume (ULV) Cold Fogger with Envirosafe, produces a high-speed airflow, resulting in a very small particle size of around 20 microns. This will mean better disinfection of airborne contaminants as the chemical will remain airborne for longer periods. Fogging kills the germs where they lie and prevents them from being transferred from one place to another (known as cross-contamination) due to its automated process.

Better than wiping down surfaces can spread germs, especially when only one cloth is used to clean all surfaces.

Other Chemical disinfectants to be used includes 70% isopropyl alcohol disinfectant and Bleach: Sodium Hypochlorite.

UV light disinfection for keyboards etc

Commercial Ozone Generator this will only be used on a rare occasion and in an unoccupied space.

Certification: details report with digital photos and video clips maybe provided at the services to our clients for their records, if required.
