

### The Quality Seal

Certified biocyclic vegan farms use the **Biocyclic Vegan Quality Seal** to label their products as “vegan from the field”, which is currently a **unique selling point** in the growing market for plant-based foods. For this, in addition to the EU (or other national) organic inspection, an inspection is carried out by an independent control body under the Biocyclic Vegan Standard.

With the Biocyclic Vegan Quality Seal, products can be recognised as **vegan from the field**.

**“I grow biocyclic vegan because the concept has the potential to fundamentally redefine agriculture and, particularly, arable farming and initiate a paradigm shift in the entire food industry towards sustainability, resilience, and healthier nutrition.”**

– Harald Strassner, biocyclic vegan arable farmer from Austria, 400 ha

Biocyclic Vegan International is a broad network promoting biocyclic vegan agriculture worldwide. Through its partner organisations in various countries, it advises growers on the conversion to biocyclic vegan and raises public awareness of the benefits of this form of cultivation.

### We can offer you:

**AN INSPIRING NETWORK**

**KNOWLEDGE SHARING OF THE BEST PRACTICES**

**PERSONALISED ADVICE**

**SUPPORT IN DEVELOPING MARKETING OUTLETS**

**EXCHANGE OF IDEAS WITH COLLEAGUES**

**COMMUNICATION MATERIALS FOR VARIOUS TARGET GROUPS**

## Grow vegan and organic

SETTING NEW STANDARDS  
WITH BIOCYCLIC VEGAN  
AGRICULTURE.

TOGETHER FOR A  
BETTER FUTURE.

As a farmer, you would like to...

... contribute to enhanced  
sustainability, climate protection  
and fairness towards animals?

... break new ground and invest  
in an agriculture fit for the future?

... produce healthy plant-based  
food directly for humans?

“We grow biocyclic vegan to show that  
agriculture without animal suffering is  
possible.”

– PlantAge, a biocyclic vegan market garden  
co-operative in Frankfurt/Oder, Germany, 30 ha

### Biocyclic vegan agriculture

Biocyclic vegan means growing organically with **plant-based fertilisers**. This includes compost, Biocyclic Humus Soil, transfer mulch or field bean meal, green manure, and a high percentage of legumes in the crop rotation.

According to the **Biocyclic Vegan Standard**, animal husbandry and the use of animal fertilisers or other inputs of animal origin are not allowed.

Biocyclic vegan agriculture attaches great importance to increasing soil fertility through a systematic **humus build-up**. The cultivation is **regenerative**, with crop rotations that are as wide as possible, abundant ground cover, intercropping and a large variety of cultures. Additionally, **biodiversity** is explicitly promoted as an essential part of preventive plant protection.

Would you like to hold your  
biocyclic vegan certificate in  
your hands soon?

We will be happy to advise you free of charge and without obligation and accompany you on your way to biocyclic vegan agriculture. Please also visit our website, where you will find all the essential background information on biocyclic vegan agriculture.
