

DANISH DESIGN 

CABIX® DEFIBRILLATOR CABINETS

Cabix defibrillator cabinets are designed to offer more than just storage. Our vision is for defibrillator cabinets to help more people to survive a cardiac arrest.

That is why we are developing defibrillator cabinets with an emphasis on visibility, availability and speed of access – because every second counts with cardiac arrest.

A defibrillator should be ready for use at all times – and a defibrillator cabinet should support this. Cabix is working to develop more intelligent cabinets which make it easier to monitor the defibrillator. That way, faults with the defibrillator can be detected in time, and lives saved. It also minimises the time spent keeping an eye on the cabinet and the defibrillator.

Sustainability is one of our core values. That is why Cabix cabinets are made from environmentally friendly materials to minimise the impact on the environment during manufacture and transport.

Cabix defibrillator cabinets have been developed in a modern Nordic design, to fit into all kinds of environments.

CABIX INDOOR

SPECIFICATIONS

Width: 39.5 cm
Height: 54.3 cm
Depth: 25.7 cm
Weight: 2.1 kg
Power: 4 x AA batteries

Functional design

Danish-designed cabinet in a functional and modern design, to fit into all kinds of environments.

Visibility

The large window gives full visibility to the defibrillator so you can see the status of the self-test.

Power-saving

Specially-developed power-saving electronics in the cabinet ensure that the batteries can last up to five years.

Integrated signage

Reflective strips on the sides and first aid instructions on the front are integrated into the design of the cabinet.

Environmentally friendly

The cabinet is made of the environmentally friendly and strong material Airpop®, which is used in eg. cycle helmets.

Battery indicator

Flashing LEDs on the front indicate when the batteries in the cabinet need to be replaced.

Alarm

When the cabinet is opened, a loud alarm sounds, to draw attention when there is an emergency.

Easy access

The magnetic catch makes it easy to open the cabinet and access the defibrillator.

Simple installation

The cabinet is easy to install, and comes with a dimension drawing and fixing set for all types of wall.
