

## Co-interventions and concomitant interventions

### The COVID STEROID 2 trial

#### ***Co-interventions***

- All co-interventions will be given at discretion of the treating clinicians
- We will recommend against the use of corticosteroids (systemically or as inhalation) and other anti-inflammatory agents (e.g. IL-6 inhibitors) after randomisation
- The COVID STEROID 2 Management Committee encourages co-enrolment in the COVID STEROID 2 trial. Co-enrolment agreements will be established with the sponsor/investigator to maintain an updated list of trials approved for co-enrolment (Trial Master file #8a)

#### ***Concomitant interventions***

All other interventions will be allowed as per the clinical team, including those affecting CYP3A4.
