.Legal Disclaimer

The information contained in this white paper is not intended to be investing, financial, trading, or any other type of advice. This document is provided for informational purposes only and is not intended to constitute (i) an offer or solicitation of an offer to invest in, or to buy or sell, any interests or crypto-token, or to participate in any investment or trading strategy; (ii) accounting, legal, or tax advice or investment recommendations; or (iii) an official statement of DAOMoon Token. No promise or warranty, explicit or implied, is given regarding the accuracy or completeness of the information or the future performance of any digital asset, financial instrument, or other market or economic indicator. The DAOMoon team does not advocate that you purchase, sell, or hold any cryptocurrency. Conduct due diligence and talk with a financial professional before making any investment choice. By purchasing DAOMoon, you acknowledge that you are not making an investment or acquiring security, and you agree to indemnify and hold the team blameless for any damages or taxes you may experience.

Additionally, you acknowledge that the team is distributing the token "as-is" and is not obligated to offer any support or services. Therefore, you should have no expectations on DAOMoon Token or its crew in any way. Although DAOMoon is a community-driven decentralized finance (DeFi) token for social networking and not a registered digital currency, the team strongly advises citizens in jurisdictions where cryptocurrencies are prohibited from purchasing this token. The team cannot guarantee compliance with established regulations in certain jurisdictions. Always ensure that you comply with any local rules and regulations before making any transaction.

.Executive Summary

DAOMoon is the world's first completely decentralized deflationary token. As with other deflationary tokens, each DAOMoon transaction is taxed, with a portion of the tax being given to holders, burned, and spent in marketing and development initiatives. With the launch of the world's first decentralized fund (DeFu), we want to attract legacy retail investors to the crypto sector, expanding the crypto market's share and bridging the divide between old and new finance. The DeFu will be the first completely decentralized wealth management service, leveraging the blockchain and the DAO. DAOMOON succeeds precisely where other deflationary tokens fail because it is designed to mitigate price volatility, while adapting tokenomics depending on market changes. DAOMON's value lies in its flexibility to adapt to new regulations and changes in the cryptocurrency market while being completely self-governing. It is a decentralized, unbiased cryptocurrency supported by the DAO that serves as the foundation for the DeFu revolution.

.Introduction

Blockchain technology offers a once-in-a-generation chance to alleviate the public's rising discontent with – and disdain for – inefficient centralized banking institutions. By dispersing data throughout a network of computers, the technology enables any group or individuals to favor openness over centralized control. Consequently, an unbiased, transparent, and highly efficient permissionless system is created, which may enhance existing global financial and monetary systems and better serve the public interest. Bitcoin was designed with this objective in mind. However, while Bitcoin succeeds as a cryptocurrency on several levels, it is not ideal as a means of exchange because of the volatility created by its fixed supply and speculative character, which prevents it from spreading as mainstream money.

On the other hand, the DAOMOON succeeds where Bitcoin fails exactly because it is meant to reduce price volatility. DAOMON's worth is in its ability to adapt to new regulations and changes in the crypto market and entirely govern its holders. It is a decentralized, impartial, DAO-backed cryptocurrency that is the ground floor for the DeFu revolution. DAOMOON is currently developing the first Decentralized Fund ever, which is designed to bring legacy retail investors into the crypto space, further increasing the crypto market share and bridging the old and new finance.

.Decentralized Autonomous Organisation (DAO)

Can you picture coordinating with individuals from all over the globe without knowing each other, defining your own rules, and autonomously making your own choices, all encoded on a Blockchain? Well, DAOs are making this a reality. Over the past several years, decentralized autonomous organizations have gained pace and are wholly integrated into many blockchain initiatives. For example, the decentralized finance (DeFi) field uses DAOs to enable applications to become completely decentralized. DAO is a self-governing organization represented by rules stored in a transparent computer program, governed by its members, and unaffected by a central authority. Because the rules are incorporated in the code, no managers are required, obviating the need for bureaucracy or hierarchy. A decentralized autonomous organization (DAO) is a non-centralized organization. Decisions are taken at the community level, controlled by a set of rules enforced on a blockchain. DAOs are decentralized autonomous organizations (DAOs) that are cooperatively owned and governed by their members. They incorporate coffers that are accessible only with the agreement of their members. Decisions are made by ideas that the group votes on over a certain period of time. A DAO operates independently of hierarchical administration and may be used for a wide variety of purposes.

Some internet users and future generations are interested in establishing social groups in order to find a solution to the question, "How can we trade values in a trustworthy environment?" While blockchain enables automated trustworthy transactions and value exchanges, internet users worldwide desire to organize themselves in a "safe and effective method to collaborate with like-minded individuals worldwide," as Ethereum puts it. A DAO is an organization where decisions are made from the bottom up; a collective of members owns the organization. There are several methods to engage in a DAO, the most common of which is through the ownership of a token. DAOs

are powered by smart contracts, simply bits of code that run automatically when a set of predefined conditions is satisfied. Nowadays, smart contracts are implemented on various blockchains, but Ethereum was the first to do so. These smart contracts define the DAO's regulations. Individuals who own a stake in a DAO are subsequently granted voting rights and can influence how the company functions by voting on or proposing new governance ideas. This strategy protects DAOs from being inundated with proposals: a proposal will succeed only if a majority approves it of stakeholders. The method used to calculate that majority differs amongst DAOs and is stated in the smart contracts. DAOs are entirely self-contained and transparent. Because they are based on open-source blockchains, their source code is publicly accessible. Additionally, anybody may audit their built-in treasuries, as the blockchain maintains a complete record of all financial activities.

.Why Decentralised Autonomous Organisation

DAOs offer significant benefits over traditional organizations due to their internet-native nature. One key advantage of DAOs is the absence of the necessity for two parties to trust one another. While a typical organization demands high confidence in its leaders – particularly on behalf of investors – DAOs require code to be trusted. Trusting that code is made more straightforward because it is publicly accessible and thoroughly tested before launch. Each action taken by a DAO following its debut must be authorized by the community and is entirely public and verifiable. This type of organization does not have a hierarchical structure. Nonetheless, it may perform activities and expand while being managed by stakeholders through its native token. Due to the absence of a hierarchy, any stakeholder can submit an innovative proposal for consideration and improvement by the entire group. Internal conflicts are

frequently resolved through the voting method, following the smart contract's pre-written regulations. By enabling investors to pool their assets, DAOs enable them to participate in early-stage enterprises and decentralized initiatives while also sharing the risk and potential gains associated with them.

.The DAOMOON Protocol

The DAOMoon Protocol is the first fully decentralized deflationary token. Like other deflationary tokens, every DAOMoon transaction is taxed, and the tax is partly redistributed to the holders, partly burnt, and partly reinvested in marketing and development efforts. This setup allows for less volatility and fast growth in the early life of the token. Unlike other deflationary tokens, the tax can be changed over time, and the coin holders fully decide the structure, members of the DAO. This is very similar to how a government can change its monetary policy to adapt to changes in markets and society. DAOMOON is the first token developed to adapt to new regulations and changes in the cryptocurrency market while remaining entirely self-governing.

.Key Features

True Decentralization: with the DAO voting system, every holder is the CEO of DAOMoon. There is no centralized management, so there is no risk for the holders.

Building the first DeFu: Our Dev Team is building disruptive projects based on DAOMoon. No, we won't make just another useless wallet or DEX to make it look like we are doing something. Instead, we are building the first DeFu: an actual bridge between the old and the new finance.

Long Term: DAOMoon is the only deflationary token that is coded to allow the holders to vote for a tax change. This makes DAOMoon adaptable to any market change beyond temporary trends.

Monetary policy smart contract: DAOMoon is one of the most dynamic and forward-thinking monetary policy contracts in the crypto space. We do not doubt that countless projects will fork it over the next five years.

Automatic redistribution in \$BNB: As a first in community coins, DAOMoon redistributed a percentage of every transaction to its holders, directly in \$BNB and fully automatically, every 60 minutes.

Safe and secure: DAOMoon is as safe as it gets. We have developed an Anti-Dump system and an Anti-Whale Bot. Moreover, we have locked the liquidity.

.The Problem with Deflationary Tokens

Deflationary tokens like SafeMoon, Shiba and Floki are very effective during their first phase to reduce volatility, reward the holders, and avoid market manipulation. But typical deflationary tokens will never be used as actual currency nor listed on large exchanges. They are effectively pyramid schemes with extra steps and virtually zero intrinsic value. This is because tokens that favor holding discourage exchange, which is exactly what large exchanges don't want. Existing solutions offer decentralized tokens managed by centralized, risky entities. Additionally, nobody would ever pay with a currency that applies a 10% tax on every transaction. Once the holders realize that the tokenomics that made the token skyrocket are actually its burden, they will flee the sinking ship, and the token's value will go back to zero.

Further, most investors can access cryptocurrency, there is much uncertainty, and the average risk assessment of a retail investor is relatively high. As a result, many individual investors choose more conservative, centralized finance assets. The few retail investors interested in crypto but without the technical skills to invest directly and want a trustworthy partner have few options: guidance is often supplied through the banking channel, which is frequently prohibitively expensive and rife with conflict of interest issues. Naturally, it is the polar opposite of decentralization.

.DAOMOON Protocol: DAO and Deflationary Unique Solution

With DAOMoon, there is no centralized management. Every Holder is CEO, and DAOMoon is true Democracy. The future of DAOMoon is entirely in the hands of its holders, who not only own the token but also decide its fate. Months of work enabled the DAOMoon Protocol to be totally flexible and respond to community votes to adapt to market changes in the long run.

The holders have the power to decide everything; with a periodical vote, they can:

- Change the redistribution rate
- Change the burn rate
- Decide the allocation of the tax (i.e. charities, marketing, and projects)
- Remove the tax altogether
- Decide on future projects

.DAOMOON Decentralised Fund

DAOMoon is the ground floor for the DeFu revolution. We are currently developing the first Decentralized Fund ever, which is designed to bring legacy retail investors into the crypto space, further increasing the crypto market share and bridging the old and new finance. Decentralized Fund (DeFu), will allow retail investors, beginners in the crypto space, to invest safely in crypto assets. Our team of crypto analysts will define and constantly update seven baskets of crypto assets for every risk profile. The DeFu will leverage the blockchain and the DAO to be the first fully decentralized wealth management service.

.Investors Option through DeFu

- Invest their funds in baskets of crypto assets, built and updated by DeFu's team of analysts.

- Choose among seven different risk profiles.
- Connect their bank account and automatically invest a portion of their income.
- Rely on the safety of Decentralized Finance, while taking full advantage of the credibility and knowledge of DeFu's analysts.

.How does the DAOMoon Protocol work

The DAOMoon Protocol is the first fully decentralized deflationary token. Like other deflationary tokens, every DAOMoon transaction is taxed, and the tax is partly redistributed to the holders, partly burnt, and partly reinvested in marketing and development efforts. This setup allows for less volatility and fast growth in the early life of the token. Unlike other deflationary tokens, the tax can be changed over time, and the coin holders fully decide the structure, members of the DAO.

.DAOMOON Protocol Information

Token Name	DAOMoon
Token Symbol	DMN
Protocol	BEP-20
Listing	PancakeSwap
Supply	1.000.000.000 (1 Billion)

.DAOMOON Tokenomics At Launch

3% Redistributed to Holders: Earn more coins by simply holding.

0.5% Burnt: Every transaction decreases supply, increasing the value of your tokens.

8% Marketing Wallet: We will spend A LOT on marketing. Even grandmas will know about DAOMoon.

0.5% Added to Liquidity Pool: Part of each transaction contributes to liquidity, making DAOMoon safer.

Anti-Dump Protection: The tax structure is doubled for sells and halved for buys below the moving average to avoid volatility and dumps.

Tax Long Term Adaptability: The Holders (DAO) can periodically vote to change, remove or add (i.e., Charity) taxes.

.DAOMOON Distribution Phases

During the First Phase, DAOMoon will take full use of deflationary tokenomics by instituting transaction taxes that will make growth exponential while shielding holders from whale manipulation and rewarding them for holding, reducing price volatility significantly.

.Phase one: Get to the Moon.

During the initial stage of DAOMoon, we will invest heavily in marketing. Our team is made up of some of the top marketers in the crypto space. Collectively, they've raised more than \$1B to boost the growth of coins with real intrinsic value. But, just like the rest of the team, they can't stand projects that aren't long-term and don't create any added value. This is why the initial tax structure is divided in a 0.5% burn, a 0.5% liquidity pool increase (which make DAOMoon deflationary, increases the value of holdings over time by increasing scarcity and make it safer). A 3% redistribution to holders (which gives even more reasons for the DAO members to keep holding) and, most importantly, an 8% marketing fund. The marketing fund will be used for a large-scale campaign, both online and offline. It will allow us to make DAOMoon a household name quickly.

.Phase two: Stay there

Once our target is reached, and DAOMoon is recognized worldwide, we will propose a vote to reduce the tax allocated to marketing to make the coin dynamic and resilient to both trading and real market use. Our contract is designed to be highly flexible, allowing for a vast number of use cases:

Progressive Taxation

DAOMoon is the first token to allow for progressive taxation. The DAO will vote on proposals to increase or decrease taxes,

depending on how rich the wallet is, to foster Equality. Because without Equality, there is no Democracy.

Charity Projects

At any time, the DAO has the power to propose and decide allocation to the charities that will have the best impact on humankind. Our team is especially keen on environmental sustainability, but the DAO will decide.

Blockchain Projects

We are already working on two disruptive blockchain projects. The DAO can vote on which one to pursue and decide how much funds should be invested in it. Keep scrolling to see what we are working on.

Token Burn

The token burn rate can be changed to easily adapt to the upcoming regulation changes and the crypto space in general. Unlike the other moon coins, this allows for DAOMoon to be consistently useful and timeless.

Welcome to the future of decentralization, welcome to DAOMoon.

The CEOs
