

DoCUTOPIA is a ecosocial, interactive sculpture, a #maplication platform and develops into an open-source, super-app with multiple layers and solutions to solve as many SDG's as possible together with artists and other "ecoheros". It's \*subnatural vision is to invite people to go on from the metaverse into the multiverse, back on the ground of mother eARTh, to it's springs, rivers, forests, seas and so on, to take care of it, map it and share knowledges about it and even organize together for everyone's benefit. Another substancial ingredient of docutopia's multiverse will be the consensus tool #wikelecta to have a transparent way of law/policy co-creation, a people-proofed polls and petition integration to start/process local, regional and (supra)national decisions within public hands from being born onwards. The live and work conditions of people in the community are going to be improved. With the help of the self-governance part of docutopia's #wikelecta all are invited to get involved via direct votes, polls to co-create laws, legislations, policies and to decide decentral and sovereign together with their region where they live. It's potential long-term outcome in the form of a cash card with an unconditional basic income, free housing as well as free healthcare self-generated through mapping and co-creation of sustainable projects and products in circular production chains, is a big vision of docutopia as reality will be partly shaped by this digital multitool too. Ambitious without a natural status, only being a "non-place" and still an utopian dream as it sounds like, maybe one day it will guide us the way to transparent currencies equality combined with peace/re and up-cylcing progress protocols including QR, NFTs, IDIs & free visas as a people-proofed passport will hopefully bring peace and justice for universal human, children, animal, labor, water and landrights as one people's world agreement. This would be an achievement I am dreaming about for our planet to come and that is why I am spending my time co-creating, spreading the word and producing art about it. I would love to be a part of the next evolutionary step of humanity from the digital information age into a multiversal peacycling era with free education, healthcare & visa, UBI, transparent economical, self-governed structures for future generations to walk proudly in our footsteps. If docutopia as a multimap, is getting integrated as well by as many other, already existing social, professional, and ecological networks as possible, it has the potential to make everyone's voices heard, recognized and visible, if they choose to join the multiverse. Together, it reconstructs & guides communities into a paradise of healthy nature with individual freedom of choice, veto power & direct consensual decisions from all for all. An equal peaceful and healthy people's global village is going to be reality, when docutopia's next versions are going live.
