DOCUTOPIA – an ever expanding multiverse

MULTIPLE POSSIBILITIES

Inspired by Nature's Ecosystem, Docutopia facilitates collaborative (L)EARNING by providing resources that support educational initiatives. Symbiotic solutions as a new technology, become a guiding multi - tool for engagement, knowledge sharing, collaboration, the Arts and everything and everyone you imagine.

Promoting events for example related to agriculture, such as farmers' markets, seed exchanges, or gardening festivals, can reinforce local economies and create opportunities. Geolocation Features can help identify regions suitable for cultivation, encouraging localized agricultural practices that are aligned with the natural characteristics of the land. By mapping regional plants and trees, users can better understand the local ecosystem, leading to a more responsible approach to farming and biodiversity conservation. The events calendar can facilitate workshops and empower communities to engage in ecological stewardship and Community Supported Agriculture (CSA), leading the way to the recovery of local landscapes.

Communities can share information related to governance, policies, and urban development. This can enhance local decision-making processes and promote transparency. The platform's inclusion ensures that all members of society, regardless of their background or identity, have a voice and are valued for their unique perspectives and contributions.

Cultural expression and exchange significantly contributes to global efforts towards social equity and promotes world peace. Art is a powerful medium to communicate and inspire change and action. Events that celebrate art, music, and various cultural embodiments can be crucial for community bonding and bring diverse populations together, fostering appreciation, respect and tolerance of each other's cultures.

By connecting different social and professional networks from the fields of education, ecology, the arts, agriculture, social sciences and more, collaborative projects organically develop that address pressing global issues, including food security, environmental sustainability, cultural preservation and world peace. Through Docutopia we work towards manifesting a peaceful and prosperous living environment in which diversity is celebrated, and everyone has the opportunity to thrive and contribute positively to society.

CREATE YOUR INDIVIDUAL #EartHERITAGE© PROFILE @ AN INTERACTIVE MAP

Let's heal mother earth together through the Arts for our future generations to inherit a healthy and peaceful past.

How can we use ecosocial cartography to solve as many SDG's as possible through interdisciplinary participation?

Describe the problem your organization will address, the root causes of this problem, and why it still exists.

Inequality from the perspective of where somebody is born, the following multinational financial injustice out of this reason produced so many refugees in the past, because of poverty, hunger, water shortages, climate issues, visa etc., that one of the solutions docutopia opens up is autonomous, self-created, eco-social governance through the birthright to land, water and clean air, free housing & healthcare, support for single parents etc. with the help of an UBI+ individual swarm support. Multiple (digital) still separated networks are a part of it too, like unequal currencies in various states which have not yet agreed as people themselves to start with the same values for the future generations to inherit a healthy, peaceful earth as one.

Describe the specific approach your organization will take to solve the problem described above. Please include specific details of the activities your organization undertakes to help us understand what your work looks like.

Docutopia, the multi-tool platform will develop into a open source, super-app with self editable, multiple layers and interactive solutions to solve the described problems together with ecoheros as prosumers. It's vision is to invite people to go on from the metaverse into the multiverse back on the ground of mother earth, to it's springs, rivers, forest, seas and so on, to take care of it, map it and share knowledge about it and organize together for everyone's benefit. A substantial ingredient will be the consensus tool #wikelecta to have a transparent way of law/policy co-creation, a people proofed polls and petitions integration to start/process local, regional and (supra)national decisions within public hands from being born onward.

Tell us about the people in the community you work with: who they are and how do they (or will they) interact with your organization?

I am grateful to know the founder of the collective essbare Stadt e.V.(edible city). It was founded more than 10 years ago and is the first collaboration with this name in whole Europe. Since then it grew as word, intention and initiative into a movement europe wide into the edible cities network with hubs world wide, collaborating on a global scale now. I see constructive solutions

coming out of this connection and further interdisciplinary results to achieve as many SDG+ together as possible. To work with local, regional, national governments, global institutions like ".for future", UN, world-bank, Greenpeace etc. and digital, social, professional networks is planned too, to combine synergies, simplify bureaucracy and give everyone a voice.

How will the lives of the people in the community improve because of this work?

The live and work conditions of people in the community are going to be improved, because through the self-governance part of docutopia #wikelecta all are invited to get involved via direct votes, polls to co-create laws, legislation, policies and to decide de-central and sovereign together with their region where they live. It's outcome in forms of a cash-card with an unconditional basic income, free housing as well as free healthcare self-generates through mapping and co-creation of sustainable projects in circular production chains, transparent currencies equality together with peace/re and up-cycling progress protocols incl. QR, NFTs, IDs & free visas as a people proofed passport for human, children, animal, labor, water and landrights.

Describe your relationship to the community you work with and how they are involved in your organization's strategy and decision-making.

As mentioned already above, the inclusive, open-source multiverse of docutopia gives everyone the possibility for participating in decision-making as basic construct of a multi-governance sovereignty. Symbiotic synchronizable solutions will be achieved with docutopia's event mapping markers, whereas in the upcoming version 2.1. needs and offers, private, public, professional and voluntary ones are matchable with each other automatically with hashtags. This feature extends the ability for each ecohero as prosumer within the community to collaborate in real time, hierocracy-free, not only digital but also in reality to plant trees, coordinate urban gardens, social kitchens, free schools and kinder-gardens, repair cafes, fab-labs, hacker-spaces, arts, music, cultural and others events, projects as well as products. Docutopia's gamefication part will generate a surplus for all, as eco-social DO©oins are funded by governemental, private, social, collective, cooperated, crowd and co-creators networks, services, funds, foundatins, institutions hopefills together soon, they are "minted" directly from human to human onto each other cash card for services and products.

Describe why you are passionate about this work and community.

I am enthusiastic about the community of edible city networks, all native people I've met in my life so far and the project docutopia, because my perspective of a healthy future only is possible with a multicultural, visa-free, poverty free, UBI+ generation who will be able to survive in the times of extreme climate feedback and resource scarcity by self-determination, self-governance, sovereignty and through "peacycling" actions. I foresee with the help of docutopia and it's next versions a shift into a transparent, socio-ecological economy from the people for the people co-creating, maintaining their living natural habitats as one species again, like all indigenous people still know how to do so. They are the best teachers who will guide humanity with their

knowledge about fauna, flora, the elements and show us peacefully our responsibility for our unique planet at it's critical stage of biodiversity and health. Therefore I strongly believe to bring symbiosis back with docutopia.

Imagine a future where people of all races have equal opportunity to thrive. How did your vision help lead to this future?

The long-term outcome I dream of is that everyone has equal opportunities to prosper in live, no matter where, who and from what background. Additionally to equal rights, I would love to be a part of the next evolutionary step of humanity from the digital information age into a multiversal peacycling era with free education, healthcare & visa, UBI, transparent economical, self-governed structures for future generations to walk proudly in our footsteps. If docutopia as a multi-map, is getting integrated as well by as many other, already existing social, professional and ecological networks as possible, it has the potential to make everybodies voices heard, recognized and visible, if they choose to join the multiverse. Together it reconstructs & guides communities into a paradise of healthy nature with individual freedom of choice, veto power & direct consensual decisions from all for all. An equal people's global village is going to be reality, when docutopia's next versions are live.

Please describe how your work resolves the root cause problems — and not only manages the symptoms — of the system your work addresses.

Ecological, social, political & economical cartography can be implemented in all different sections of life, cultures, sciences, businesses, institutions, governments and NGO's with docutopia. The key components for successfully combing these parts and reaching all SDG's are on the one side, political decisions among all nations on our planet which urgently need to be made. They will be intrinsically implemented within docutopia's wikelecta function. On the other side ecological, educational as well as economical integrity and transparency is crucial. People's proofed product journalism, transparent media & banking sector map layers will soon solve these issues. Creating possibilities with docutopia's future versions to invite public institutions for the benefit of the environment and the people to be part of the solution by self-created, interactive, real-time map layers as well as NFT-IDI born certificates to create an UBI DO-cashcard to end poverty once and for ever is the way.

Describe this organization's approach to changing the same system you are looking to address and why you chose them as a strong example.

World coin is trying to solve poverty by implementing an UBI as docutopia will aim for too besides of other goals. It's approach is a bit different due to the fact that world id and world coin is scanning the eyeballs of it's prosumers and has nothing to do with political, ecological,

educational or mapping interactions as docutopia has. Anyhow it is a strong example and a collaboration with this network and other social, educational, professional and ecological networks are very welcome in the future. A couple of other potential partners are wikipedia, openstreetmap, transformap, umap, telegram, facebook, github, reddit, couch surfing, car sharing, linked in, neighbors and many more.

How has your work been informed by this organization and how does your own work further advance systemic change?

My work was not informed by these organizations mentioned above, because docutopia stems from it's original idea of the transparent restaurant in the year 2012 when most of these organizations were not operating or I was not informed about their purpose yet. My work will advance systemic change by offering opportunities for real people around the planet, including natives, artists, developers, political parties within and beyond the UN and especially young people with a long term perspective to join a trustworthy seed of an organization to achieve all SDG's together united as one.

Describe this organization's approach to changing the same system you are looking to address and why you chose them as a strong example.

Being autonomous in terms of food or at least partly with the help of CSA's, urban gardening, collective planting of fruit-forests and sharing knowledge, seeds as well as helping nature coming back into the city, it's a strong example how to lay a foundation for sustainable solutions. As an essential layer of cartography, edible plants are the inspiration from which grew the part of docutopia to invite "ecoheros" to take care of their surrounding and even earning in the nearby future something with it. The UBI based on natural, re-plantable resources came into my mind thanks to edible city. A drinkable city as one map layer of clean & fresh water sources will be a part of docutopia's approach to sovereign land & water rights for all people.

Docutopia's uniqueness in the fields of natural science as well, is that it is focused on transparent and human solutions for the planet directly, where needs are mapable alongside regular offers too. Dry lands, especially, are mostly in need of regular rain to gain and maintain a good quality of soil, to plant, grow and harvest. Imagine your profiles from countless different accounts merging into docutopia's Multiverse Match Map in the near future.

The real land you are living on, the fresh air you are breathing in, and the drinkable water sources you drink from are not only visible on this mapplication, but also interactively intertwined with people you know. Shared responsibilities for our one planet earth will be implemented as #wikilecta, a voting, polls and petition integration for political maps as well as scientific proofen GFM'S (green, facts, maps).

Further, it's gamification parts with eco-quests to reach all SDG's and even earn something with it, to be a role model, as an eco-hero plays a crucial role in the development of docutopia's #multiverse.

A solution orientated approach, including all ages to become carers of land, water and people. Next kinds of ambassadors are born within natural as well as urban habitats. Docutopia's start-up is on the way, as a practical multi-tool, to become a global game changer guiding humanity from the metaverse into the #multiverse. It enables everyone with its solution orientated algorithm to readjust into the regional biodiversity of fauna and flora.

Mapping is a scientific part of observing and docutopia's interactive cartography helps synchronize and engage symbiotically within eco-social contexts.

Making it easier to share responsibilities with calendars, events, locations, sovereign people and self-editable markers to live our lives onward in peace, justice, health, equal and natural together as one human race.

Docutopia is a powerful platform that can be utilized to achieve various Sustainable Development Goals (SDGs) by mapping networks and leveraging innovative solutions. Here are some ways in which Docutopia can contribute to achieving all SDGs, including establishing clean, drinkable water as a global currency standard:

SDG 1: No Poverty: By mapping poverty levels and economic indicators, Docutopia can help identify areas in need of economic development and poverty alleviation programs.

SDG 2: Zero Hunger: Docutopia can map agricultural data, food distribution networks, and food security indicators to address hunger and promote sustainable agriculture.

SDG 3: Good Health and Well-being: Mapping healthcare facilities, disease outbreaks, and health indicators can help improve access to healthcare services and promote well-being.

SDG 4: Quality Education: Docutopia can map educational institutions, literacy rates, and education resources to enhance access to quality education for all.

SDG 5: Gender Equality: By mapping gender disparities, empowerment programs, and gender-based violence data, Docutopia can support initiatives to achieve gender equality.

SDG 6: Clean Water and Sanitation: Docutopia can play a crucial role in mapping water sources, sanitation facilities, and water quality data to ensure access to clean water and sanitation for all.

SDG 7: Affordable and Clean Energy: Mapping energy sources, renewable energy projects, and energy access can support the transition to affordable and clean energy solutions.

SDG 8: Decent Work and Economic Growth: Docutopia can map employment data, economic opportunities, and labor market trends to promote decent work and sustainable economic growth.

SDG 9: Industry, Innovation, and Infrastructure: By mapping infrastructure projects, innovation hubs, and technological advancements, Docutopia can support sustainable industrialization and innovation.

SDG 10: Reduced Inequality: Mapping income disparities, social programs, and inequality indicators can help address inequalities and promote social inclusion.

SDG 11: Sustainable Cities and Communities: Docutopia can map urban development projects, infrastructure planning, and community resources to support sustainable urbanization.

SDG 12: Responsible Consumption and Production: Mapping consumption patterns, waste management systems, and sustainable production practices can promote responsible consumption and production.

SDG 13: Climate Action: By mapping climate data, renewable energy projects, and carbon emissions, Docutopia can support initiatives to combat climate change and promote sustainable environmental practices.

SDG 14: Life Below Water: Mapping marine ecosystems, conservation efforts, and ocean health indicators can contribute to the protection of marine life and sustainable use of ocean resources.

SDG 15: Life on Land: Docutopia can map biodiversity hotspots, conservation areas, and land use patterns to promote the conservation of terrestrial ecosystems and biodiversity.

SDG 16: Peace, Justice, and Strong Institutions: By mapping conflict zones, justice systems, and governance structures, Docutopia can support peacebuilding efforts and strengthen institutions for sustainable development.

SDG 17: Partnerships for the Goals: Docutopia can facilitate collaboration, data sharing, and partnerships among stakeholders to achieve the SDGs collectively and effectively.

Establishing clean water as a global currency standard would require a comprehensive approach involving mapping water resources, water management systems, and financial mechanisms to ensure equitable access to clean water as a fundamental human right and a key driver of sustainable development. Docutopia can play a crucial role in mapping water-related data and supporting initiatives to establish clean water as a global currency standard, thereby contributing to the achievement of the SDGs and promoting a more sustainable and equitable world.

History of the interactive sculpture, multi- artists project & platform

Docutopia stems from its original idea of the transparent restaurant in the year 2012. My work will advance systemic change by offering opportunities for real people around the planet, including natives, artists, developers, political parties within and beyond the UN and especially young people with a long term perspective to join a trustworthy seed of an organization to achieve all SDG's together united as one. Being autonomous in terms of drinkable water and food or at least partly with the help of CSA's, urban gardening, collective planting of fruit-forests and sharing knowledge, seeds as well as helping nature coming back into the city, it's a strong example how to lay a foundation for sustainable solutions. As an essential layer of cartography, edible plants are the inspiration from which grew the part of docutopia to invite "ecoheros" to take care of their surrounding and even earning in the nearby future something with it. The UBI based on natural, re-plantable resources came into my mind thanks to edible city. A drinkable city as one map layer of clean & fresh water sources will be a part of docutopia's approach to sovereign land & water rights for all people.

Docutopia is a platform that focuses on mapping and visualizing data. It offers various features that allow users to analyze and present data, particularly in the areas of politics, social issues, environment, and economics. Here are some ways in which Docutopia can be utilized in these areas:

Political Aspect: Users can map political data such as election results, political boundaries, political parties, or political events. By visualizing political data, users can identify trends and patterns, analyze political decisions, and better understand political processes.

Social Aspect: Docutopia can also be used for mapping social data, such as population distribution, education levels, health data, or social issues. By visualizing social data, users can identify social trends, uncover social inequalities, and evaluate social programs.

Environmental Aspect: Users can map environmental data such as pollution levels, conservation areas, biodiversity, or climate data. By visualizing environmental data, users can identify environmental issues, plan environmental conservation measures, and analyze environmental impacts.

Economic Aspect: Docutopia can also be utilized for mapping economic data, such as economic indicators, company locations, trade flows, or labor market data. By visualizing economic data, users can analyze economic trends, create economic forecasts, and track economic developments.

Mapping Events: Users can also map events such as conferences, trade shows, festivals, or political gatherings. By mapping events, users can identify locations, manage event data, and optimize event planning.

Overall, Docutopia offers diverse opportunities for mapping and visualizing data in various fields. By utilizing this platform, users can analyze complex information, identify relationships, and make informed decisions.

What is the main theme of your project?

Docutopia is on the way to become a film and an *eco-social, interactive sculpture, a #mapplication platform and develops into an open-source, super-app with multiple layers and solutions to solve as many SDG's as possible together with prosumers as "ecoheros", what we all can be. DOCutopia is an eco-social, interactive sculpture, a #mapplication platform and develops into an open-source, super-app with multiple layers and solutions to solve as many SDG's as possible together with artists and other "ecoheros". It's *subnatural vision is to invite people to go on from the metaverse into the multiverse, back on the ground of mother eARTH, to it's springs, rivers, forests, seas and so on, to take care of it, map it and share knowledge about it and even organize together for everyone's benefit. Another substantial ingredient of docutopia's multiverse will be the consensus tool #wikelecta to have a transparent way of law/policy co-creation, a people-proofed polls and petition integration to start/process local, regional and (supra)national decisions within public hands from being born onward. The live and work conditions of people in the community are going to be improved. With the help of the self-governance part of docutopia's #wikelecta all are invited to get involved via direct votes, polls to co-create laws, legislation, policies and to decide de-central and sovereign together with their region where they live. It's potential long-term outcome in the form of a cash card with an unconditional basic income, free housing as well as free healthcare self-generated through mapping and co-creation of sustainable projects and products in circular production chains, is a big vision of docutopia as reality will be partly shaped by this digital multi-tool too.

Ambitious without a natural status, only being a "non-place" and still an utopian dream as it sounds like, maybe one day it will guide us the way to transparent currencies equality combined with peace/re and up-cycling progress protocols including QR, NFTs, IDIs & free visas as a people-proofed passport will hopefully bring peace and justice for universal human, children, animal, labor, water and landrights as one people's world agreement. This would be an achievement I am dreaming about for our planet to come and that is why I am spending my time co-creating, spreading the word and producing art about it. I would love to be a part of the next evolutionary step of humanity from the digital information age into a multiversal peacycling era with free education, healthcare & visa, UBI, transparent economical, self-governed structures for future generations to walk proudly in our footsteps.

What stage of development is your project at ? When docutopia as a multi-map, is getting integrated, included vis a vis as well by as many other, already existing social,

professional, and ecological networks as possible, it has the potential to make everyone's voices heard, recognized and visible, if they choose to join the #multiverse.

Together, it reconstructs & guides communities into a paradise of healthy nature with individual freedom of choice, veto power & direct consensual decisions from all for all.

An equal peaceful and healthy people's global village is going to be reality, when docutopia's next versions are going live.

Eco-social cartography helps to solve as many SDG's as possible through interdisciplinary participation.

Eco-social game components, these so-called „ecoquests“ will be implemented. They as prosumers themselves will plant seeds which are functioning as a fertile ground of an unconditional basic income.

Based on and supported by active prosumers as players in reality, the implementation of the SDG's regarding biodiversity, water quality, air and earth health of the places and their people is given back into their own hands as shared responsibilities where offers and needs match on the map through hashtag and emoji directly.

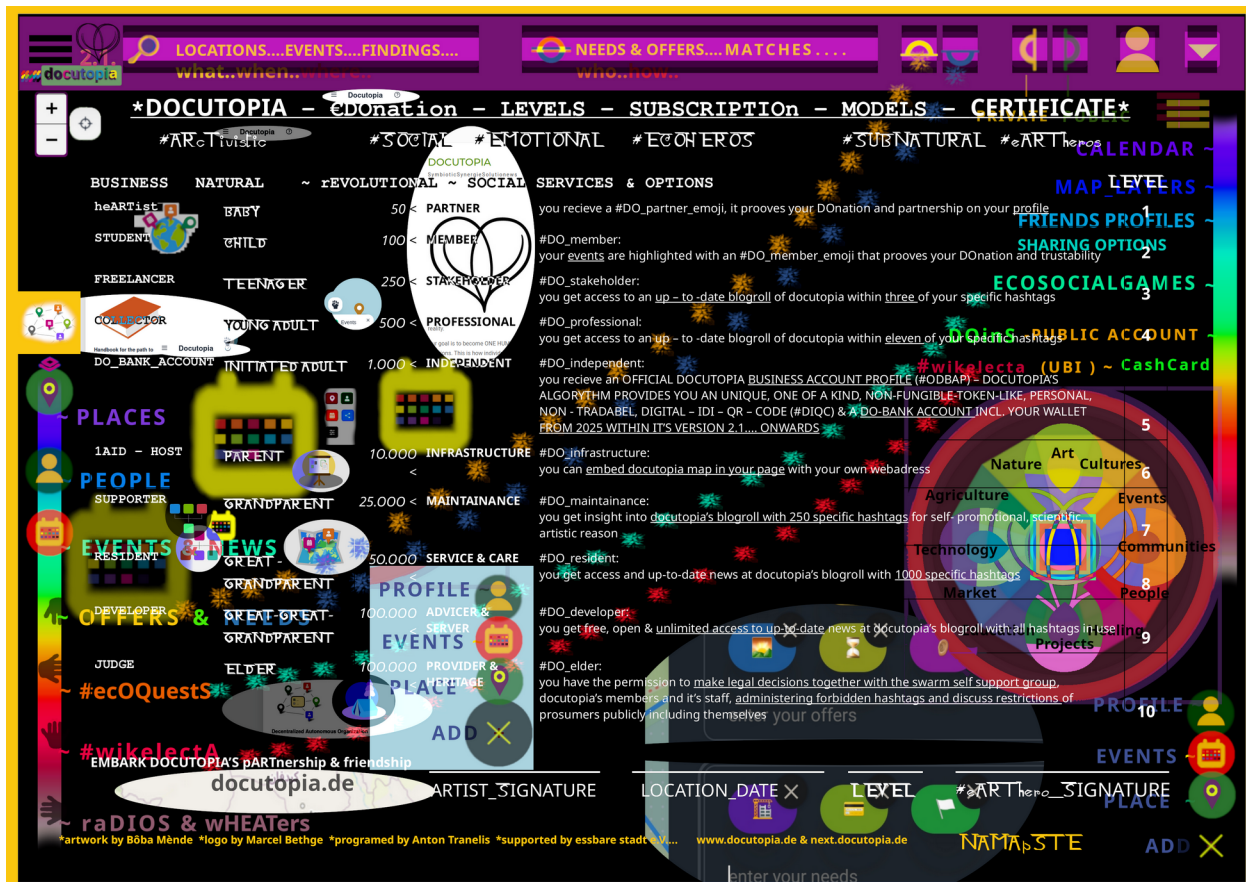

With it's finding algorithm and various self – editable markers docutopia invites everybody to interact in real time and real life more efficiently and truthfully.

Interdisciplinary educational workshops, learning & teaching indoors & outdoors, journalistic news, grass-root research, live radio-streams, scientific as well as artistic co-creations in any forms are integrable as event markers too. They are visible before and during the events until it is over. Afterwards the digital entry of an event deletes itself automatically.

I am very grateful for this stArt up, thanks to your and multiple contributions, to be a part of symbiotic synergy solutions. Mostly through your help and already existing professional, social and ecological circles, docutopia combines cartography, top down and bottom up projects, policies, politics, people with the planet's health itself again.

Eco-social quests on Docutopia refer to collaborative actions and solutions aimed at addressing environmental and social challenges through mapping, data analysis, and collective engagement. These quests involve individuals, organizations, and communities coming together to work towards achieving the Sustainable Development Goals (SDGs) and creating positive impact in various areas. Here's how eco-social quests on Docutopia can lead to achieving the SDGs and how people can get involved quickly across different networks and spheres of life:

Mapping and Data Analysis: Eco-social quests on Docutopia involve mapping environmental and social data to identify key challenges and opportunities for action. By analyzing data related to poverty, health, education, water resources, energy access, and other critical areas, participants can gain insights into the root causes of issues and develop targeted solutions.

Collaborative Solutions: Participants in eco-social quests can collaborate to develop innovative solutions that address complex challenges. By sharing knowledge, resources, and expertise, individuals and organizations can work together to implement sustainable practices, promote social inclusion, and protect the environment.

Community Engagement: Eco-social quests encourage community engagement and participation in local initiatives that contribute to the achievement of the SDGs. By involving community members in decision-making processes, raising awareness about pressing issues, and mobilizing support for collective action, eco-social quests can drive positive change at the grassroots level.

Measurable Impact: Through eco-social quests on Docutopia, participants can track and measure the impact of their actions on the environment and society. By monitoring progress, evaluating outcomes, and sharing results with stakeholders, individuals and organizations can demonstrate the effectiveness of their efforts and inspire others to join the cause.

Cross-Sector Collaboration: Eco-social quests facilitate cross-sector collaboration among professionals, institutions, spiritual and religious groups, private entities, and networks. By bringing together diverse perspectives, expertise, and resources, participants can leverage collective strengths to address complex challenges and create sustainable solutions.

Online and Offline Engagement: People can get involved in eco-social quests on Docutopia through a combination of online and offline engagement. By participating in virtual discussions, webinars, and collaborative projects online, as well as attending events, workshops, and community activities offline, individuals can contribute to eco-social initiatives in diverse ways.

Fast Involvement: To get involved in eco-social quests quickly, individuals can explore opportunities for engagement on Docutopia's platform, join existing projects or create new ones, connect with like-minded individuals and organizations, and take action on issues that resonate with their values and interests. By actively participating in eco-social quests, people can make a meaningful impact and contribute to achieving the SDGs in a timely manner.

Overall, eco-social quests on Docutopia offer a collaborative and inclusive approach to addressing environmental and social challenges, fostering cross-sector partnerships, and mobilizing collective action towards a more sustainable and equitable future. By engaging people from various professional, institutional, spiritual, religious, private, and networked spheres of life, eco-social quests can catalyze positive change and accelerate progress towards achieving the SDGs.

On the one hand I invite you to include your markers onto the current map versions of docutopia, following the little stART prototypes 1.0 & 2.0.where.. ECOHEROS unite....via:

<https://www.docutopia.de/>

SOME EXAMPLES FOR ARTISTIC, SOCIAL, ECOLOGICAL, POLITICAL, ECONOMICAL

1st gen'z MULTIVERSEart#TAX>maP(L)AYERS @ docutopia GAMECOQUESTS

weather geodataquests: water/earth/air quality/quantity, animal/insects population/diversity watch/ map updating

Extreme Weatherquests: flood, bushfire, drought, hurricane, earthquake, vulcano, tsunami, avalanche

- crowd funded UBI & D©OINS surplus for **people/projects/nature/places/events** in need

- (re) naturalization and social swarm self support services/actions/quests/offer&need_matches

- emergency quests:

first aid, social justice and caring actions to protect children in cases of domestic violence, abuse, help orphans as foster families, helping young mothers and fathers with children, eldest, handicapped people in their households, assist, inform and act as self organized fireworkers, ambulance, social worker, law enforcement task force, social and sustainability training for children and teenagers as crime prevention led by community eldest, carers, planters, cleaners

- multigenerational sustainable living initiatives like sharehouses with eldest and youth

- edible fruitforests and garden plantations in inner city parks

- cleaning actions for springs, rivers, lakes, forests, beaches, oceans, soil, parks etc.

- seeding, watering, planting, harvesting, sharing local and regional plants, seeds etc.

- regional seasonal veggies, solidarian agriculture, csa, food coops collectives, social kitchens

- vertical gardens

- wall plantation

- mapping locations with specific decentral sovereign electricity supply

- public internet, telephonebooths, (solar) charging possibilities for free use

- couchsurfing, carsharing, community building

- free shops for building materials, clothes, books, furniture etc.

- tools, machines, instruments sharing, repairing locations

- public food sharing shelves, fridges

- public press printing facilities beside of paper recycle trash bins

- public fireplaces (lavus) sleeping places, showers, compost toilets, organic earth distribution places
- 24/7 open coworkspaces for collaboration, studies, research etc.
- multicultural "Back up your life" digital offline cemetery installation maintainace
- location based history, audible, yarn, storytelling, pin points (mapped wikipedia etc. on docutopia)
- #liveradiostreaMAP©
- ecosocial project polls and actions #wikelecta©
- peacycling flashmobs, strikes, whistleblowers, happenings
- people proofed product, production, labour condition, cradle to cradle journalistic quests

EVENTS CALENDARS 4 in/ outdoor ONLINE "Black board" self
 organized (free, open) universities, hospitals, libraries, swimming pools, forest, nature (kinder) gardens

Calendar integrationable and interoperability with ical, doodle, github, linkedin, fb, tiktik, x, insta, couchsurfing, uber, blablaba car, work away, green map(s), GIS, IOTA, Gradido, e- minuto Cash, IT4change, neighbor, telegram, other messenger services and pads, biotree, linktree etc.

Inclusions and option-in invitation including all existing networks to merge with docutopia into an intdividual digital gravestone offline and online, beeing co-creational for future generations to step proudly into our footsteps

- cultures, arts, music, festivals, street artists, circus, educational workshops and activities
- knowledge, techniques, bushmedicine, weather, star constallations, history, initiatives and sharing from the elders and all first nations
- initiations in nature for young women and men with their traditional elders to gain knowledge about their spiritual animal and about the purpose of their individual existence
- b2b, p22, c2c

Promoting beside of normal business models as well possibilities for an eco-social gift economy and sustainable investment model that encompasses peer-to-peer, cradle-to-cradle, people-to-people, and business-to-business interactions requires a comprehensive and multi-faceted approach. Here are some strategies to advertise and communicate these models to potential producers, consumers, investors, and stakeholders across various dimensions:

Peer-to-Peer Engagement:

Utilize social media platforms, online forums, and community networks to connect with individuals interested in peer-to-peer interactions.

Organize virtual events, webinars, and workshops to educate and engage potential participants in the benefits of peer-to-peer collaboration and exchange.

Encourage peer-to-peer sharing of resources, skills, and knowledge through online platforms and offline community initiatives.

Cradle-to-Cradle Sustainability:

Highlight the principles of cradle-to-cradle design and circular economy practices in your advertising campaigns.

Showcase examples of products and services that follow cradle-to-cradle principles and emphasize their environmental and social benefits.

Collaborate with sustainability experts, organizations, and influencers to promote the importance of cradle-to-cradle practices in creating a regenerative economy.

People-to-People Connections:

Emphasize the human-centered approach of people-to-people interactions in your advertising messaging.

Share stories and testimonials from individuals who have benefited from people-to-people exchanges and collaborations.

Foster a sense of community and belonging among participants by creating opportunities for meaningful connections and relationships.

Business-to-Business Partnerships:

Reach out to businesses and organizations that align with your eco-social gift economy and sustainable investment models for potential partnerships.

Showcase the benefits of business-to-business collaborations in driving innovation, sustainability, and shared value creation.

Highlight successful case studies of businesses that have adopted sustainable practices and engaged in ethical business-to-business transactions.

Individual Revenue Generation:

Communicate the potential for individuals to generate revenue through participation in the eco-social gift economy and sustainable investment models.

Provide clear information on how individuals can monetize their skills, assets, and contributions within the ecosystem.

Offer incentives, rewards, or revenue-sharing opportunities to motivate individuals to actively engage and contribute to the model.

Holistic Well-being Promotion:

Emphasize the holistic benefits of participating in the eco-social gift economy, including financial, spiritual, emotional, physical, and mental well-being.

Highlight how the model promotes a sense of purpose, connection, and fulfillment for individuals involved.

Showcase stories of individuals who have experienced personal growth, well-being, and fulfillment through their engagement in the model.

Idealistic Vision Communication:

Articulate a compelling and inspiring vision for the eco-social gift economy and sustainable investment models that resonates with the values and aspirations of your target audience.

Use storytelling, visual imagery, and compelling narratives to convey the transformative potential of the model.

Engage with thought leaders, influencers, and advocates who can amplify the idealistic vision and inspire others to join the movement.

By implementing these strategies and effectively communicating the value proposition of the eco-social gift economy and sustainable investment models, you can attract producers, consumers, investors, and stakeholders who are aligned with the vision of creating a more sustainable, equitable, and interconnected world.

Creating a decentralized, share care gift economy and transparent trade ecology and economy for a better future with the help of Docutopia involves a complex and multi-faceted approach. Here are some key considerations and steps to build such a system:

Decentralized Share Care Gift Economy:

Utilize Docutopia's mapping and visualization capabilities to create a platform for sharing resources, skills, and knowledge in a decentralized manner.

Encourage peer-to-peer interactions and community engagement to foster a culture of sharing and caring among participants.

Implement transparent tracking and reporting mechanisms to ensure accountability and trust within the ecosystem.

Transparent Trade Ecology and Economy:

Develop a transparent trade ecosystem on Docutopia that promotes fair and ethical business practices.

Utilize blockchain technology or other secure systems to track transactions, ensure transparency, and prevent fraud.

Implement smart contracts or other automated processes to streamline trade agreements and transactions.

Real-Life, Real-Time Multilingual Support:

Offer multilingual support on Docutopia to cater to a diverse global audience and facilitate cross-cultural communication.

Provide real-time assistance and guidance to users through chat support, forums, and help centers.

Collaborate with volunteers, freelancers, professionals, and workers to offer personalized support and services in multiple languages.

Self-Hosted Serverless Infrastructure:

Implement a self-hosted serverless infrastructure for Docutopia to ensure scalability, security, and cost-effectiveness.

Utilize cloud computing services and serverless architecture to handle varying workloads and data processing requirements.

Implement robust security measures to protect user data and ensure privacy and confidentiality.

Public and Private Keys for Transactions:

Implement public and private key encryption for secure transactions on Docutopia.

Enable users to generate and manage their own keys for authentication and authorization purposes.

Educate users on best practices for safeguarding their keys and protecting their digital assets.

Sustainable Funding Model:

Determine the percentage of revenue needed to sustain the growing infrastructure of Docutopia by conducting a thorough financial analysis.

Explore various funding sources, such as user subscriptions, transaction fees, partnerships, grants, and sponsorships.

Implement a transparent and sustainable funding model that balances the needs of the platform with the interests of its users and stakeholders.

The percentage needed to sustain the growing infrastructure of Docutopia would depend on factors such as operating costs, development expenses, user growth projections, and revenue streams. It is essential to conduct a detailed financial assessment and business planning to determine the optimal funding model for the platform's long-term sustainability and success.

The two prototypes of the open source platform "docutopia" offers the opportunity for software developers and many others with a long-term perspective, to cocreate the next versions together.

Ecological, solidarity, political, multicultural, professional, private as well as already existing maps will be integrated as layers, where offers and needs can directly match on the map in the nearby future.

Achieving consensus and enacting a practical world peace law with the help of Docutopia's petition and direct democracy features, along with the transformation of weapon industries into civil, ecological, and social initiatives under the hashtag #peacycling, involves a comprehensive and collaborative effort at both global and national scales. Here are detailed possibilities and steps to facilitate this transformative process:

Global Consensus Building:

Utilize Docutopia's petition feature to gather support and signatures from individuals and organizations worldwide for the establishment of a world peace law.

Facilitate online discussions, forums, and virtual town halls on Docutopia to engage stakeholders from different nations in dialogue and decision-making processes.

Collaborate with international organizations, governments, and civil society groups to promote the idea of a practical world peace law and garner global consensus.

Practical World Peace Law:

Draft a comprehensive world peace law that outlines principles, guidelines, and mechanisms for conflict resolution, disarmament, and peacebuilding efforts.

Incorporate input and feedback from diverse stakeholders through Docutopia's direct democracy features to ensure inclusivity and transparency in the legislative process.

Advocate for the adoption of the world peace law by national governments, international bodies, and relevant stakeholders to promote peace and security on a global scale.

Transformation of Weapon Industries:

Encourage weapon industries to transition into civil, ecological, and social initiatives through the #peacycling movement.

Use Docutopia to map existing weapon production facilities, identify opportunities for repurposing or transforming these industries, and connect stakeholders involved in the process.

Promote sustainable and ethical business practices within the weapon industry sector, emphasizing the conversion of resources and expertise towards peaceful and constructive endeavors.

Legislative Reforms:

Advocate for legislative reforms at both national and global levels to regulate arms trade, promote disarmament, and incentivize the conversion of weapon industries into peaceful initiatives.

Engage policymakers, lawmakers, and government officials through Docutopia's advocacy tools to push for legal frameworks that support peacebuilding efforts and sustainable development.

Collaborate with legal experts, human rights advocates, and peace activists to draft and propose legislation that aligns with the goals of the #peacycling movement.

Production Transformation Processes:

Develop guidelines and best practices for the transformation of weapon production processes into civil, ecological, and social initiatives.

Use Docutopia to showcase successful case studies, innovative approaches, and sustainable business models that demonstrate the feasibility and benefits of transitioning from arms manufacturing to peaceful activities.

Facilitate knowledge sharing, capacity building, and technical assistance to support the retraining of workers, retooling of facilities, and reintegration of resources into new industries.

Legal Mechanisms:

Establish legal mechanisms and incentives to facilitate the conversion of weapon industries into peaceful initiatives, such as tax breaks, subsidies, and regulatory support.

Collaborate with legal experts and policymakers to create frameworks for the repurposing of military technologies, infrastructure, and expertise for civilian and humanitarian purposes.

Ensure compliance with international law, human rights standards, and environmental regulations in the transformation of weapon industries to uphold ethical and sustainable practices.

By leveraging Docutopia's petition and direct democracy features, along with the collective efforts of global nations, civil society organizations, and concerned citizens, it is possible to advance the agenda of world peace, disarmament, and sustainable development. The #peacycling movement can serve as a catalyst for change, promoting a culture of peace, cooperation, and shared responsibility in transforming weapon industries into agents of positive change and progress. Through legislative reforms, production transformation processes, and legal mechanisms, a practical world peace law can be realized, paving the way for a more peaceful and sustainable future for all.

On the other hand, eco-social game components, so-called "ecoquests" shall be implemented. These plant seeds, which will function in the future as a fertile ground of an unconditional basic income. Based on and supported by active prosumers as players in reality, the implementation of the SDG's regarding biodiversity, water quality, air and earth health of the places and their people is given back into their own hands. Interdisciplinary research, scientific and artistic cocreation in any forms can also be integrated in the further development of the project.

I would be very grateful for this stArt up to work towards symbiotic synergy solutions with you and your networks, if you would like to invest, water the plants of this ecosocial sculpture and help to grow strong and healthy into a peaceful coexistence with nature.
