PORCELANOSA KITCHENS

why working with PORCELANOSA KITCHENS

Production CAPACITY

GAMADECOR's furniture manufacturing facilities cover an area of 125,000 m2, with a work system conceived to adapt the work load to its production capacity.

Cutting-edge TECHNOLOGY and DESIGN

GAMADECOR uses state-of-the-art machinery to manufacture its furniture. It also conducts ongoing studies of design trends, as demonstrated by the prestigious international design awards that it has received, such as Good Design or Red Dot.

Made in EUROPE

GAMADECOR's furniture is fully manufactured in Spain and the cabinet hardware for all its products is made by leading European brands. All the board that it uses comes with the FSC® label. This guarantees that it is harvested from responsibly managed forests in accordance with sustainable tree-felling criteria.

AFTER-SALES service

GAMADECOR is committed to offering quality and first-class service to customers. To meet this goal, it offers a speedy, efficient after-sales service through all official distributors of PORCELANOSA GRUPO in the almost 100 countries in which it operates

The BRAND

The assurance of PORCELANOSA Grupo, a major business group that has forged a leading reputation both in Spain and abroad, supplying products to more discerning market segments.

ALL-ROUND consultancy advice

PORCELANOSA Grupo is present in almost 100 countries worldwide, offering an all-round design, onsite supervision and assembly service, with total dedication to the task thanks to its extensive team of staff.

A choice of PRODUCT RANGES

GAMADECOR offers a choice of three different kitchen collections and their corresponding models to meet differing kitchen design requirements. In addition to its kitchen furniture, GAMADECOR also manufactures a wide range of bathroom furniture, wardrobes and walk-in closets.

Assured QUALITY

Each of PORCELANOSA Grupo's different companies offer the assurance of superior quality, endorsed by over 40 years' experience manufacturing top-quality products able to pass the strictest resistance and stress tests.

CENTRO LOGISTICO

GAMADECOR

Presentation of PROJECTS kitchens.

The Projects kitchen collection by PORCELANOSA is designed to meet the needs of large-scale kitchen design projects where optimum logistics are required. This collection is made of board from sustainably harvested forests, with cabinet hardware by leading European brands. It is fully made in Spain.

MADE IN EUROPE, using top-quality manufacturing processes.

PORCELANOSA's kitchens are fully manufactured in Europe in accordance with meticulous quality controls. Top-range cabinet hardware, made by leading European brands, is used for all its products.

Plinths to meet DAY-TO-DAY NEEDS, both in terms of their resistance and the ease with which they can be removed and replaced.

The base of the Project kitchens are made of highly resistant polymers covered in aluminium, a material with a high resistance to rust. They feature a rubber seal along the bottom to protect them from small spillages of water. The skirtings can be removed since they are clipped to the legs of the units, making it easy to clean underneath them.

Sophisticated colours in LAMINATE and HPL finishes.

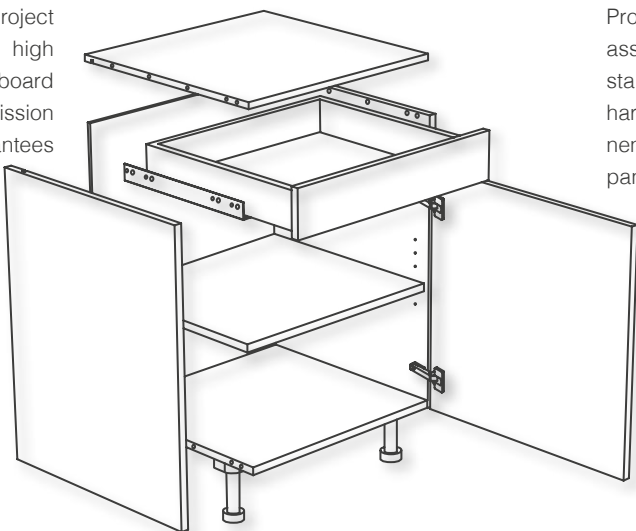

In conjunction, the different laminate and HPL finishes in the Project collection come in a wide variety of colours. In a laminate finish, there is a choice of:
-Plain colours in a matt finish or an imitation wood finish with a textured surface. These finishes have ABS edgebanding bonded to the board with PUR adhesive, which can withstand temperatures of up to 150°C.
In an HPL finish, there is a choice of:
-Bright colors with shades that follow the latest design trends. These finishes have ABS edgebanding bonded to the board with PUR adhesive, which can withstand temperatures of up to 150°C.

Blanco Núbol	Niebla	Zinc	Bison	Cool
Graffiti	Roble Blanco Orgánico	Roble Orgánico	Roble Arenado	Roble Tierra
Roble Pardo	Roble Negro	Nogal Moon	Blanco Sal	Gris Hook brillo
Cement brillo	Storm Brillo	Mouse brillo	Topo brillo	

Technical specifications

HIGH-RESISTANCE board to cope with demanding conditions.

The carcass of the modules of the Project kitchens are manufactured from high resistance, 16 mm thick chipboard board with a CARB-2 formaldehyde emission rating and FSC®certified, which guarantees the responsible use of wood. The edges are covered in watertight ABS edgebanding, bonded to the board with PUR adhesive, which has a high resistance to impacts and capacity to withstand temperatures of up to 150°C. Thanks to all these characteristics, the faced boards are fully equipped to meet all the day-to-day contingencies of a kitchen.

MAXIMUM STABILITY guaranteed.

Projects kitchens by GAMADecor offer the assurance of robust resistance and greater stability thanks to their construction, using hard wood dowels to assemble the components, glued at the same time as the back panel is inserted. The end result is a compact, highly stable ensemble. The weight is also equally distributed through the side panels and base to the four high-resistance ABS legs, which are height adjustable. This prevents the unit from gradually sagging due to the weight of the countertop, again ensuring long-lasting durability.

TOP-QUALITY CABINET HARDWARE by leading European brands.

Projects kitchens feature the latest models in cabinet hardware by leading European brands. This leads to kitchens with cutting-edge mechanisms, made of top-quality materials, with the guarantee of manufacturers that have been innovating for decades and improving the resistance and performance of these systems.

MORE CONVENIENT drawers.

The drawers and deep drawers are made using the top-range Arcitech model by Hettich, which features aluminium sides and full-extension soft-close drawer runners. This protects the unit from impacts if the drawers slam shut, preventing the unit from breaking before it reaches the end of its useful life. The drawers can also withstand weights of up to 80 kg and they have passed the most demanding tests, with open-close cycles that surpass the 60,000 cycles required in the corresponding standard.

HIGHLY ROBUST hinges.

Top-range Silentia 700 hinges by Salice are used for the doors. These are fully metallic and three dimensionally adjustable, with a high resistance to moisture, a simple clip system for mounting or removing the doors and, like the drawers, they incorporate a soft-close system to protect the doors from impacts and thus extend the kitchen's useful life.

SOPHISTICATED shelf supports.

The highly resistant inner shelf supports feature an anti-tip mechanism, thus avoiding accidents if the shelf tips over and the objects fall off. The shelf supports are transparent, which helps to conceal them, and they are easy to remove if the shelves need adjusting to the required height in the side holes.

CARB-2 / EPA rated board with ultra low emission of fomaldehyde.

The panels used in carcasses are even more health-conscious thanks to the lowest formaldehyde emission certified in the CARB II (ATCM 93120) / EPA (US EPA TSCA Title VI) in Formaldehyde emission.

More SUSTAINABLE kitchens.

GAMADecor is committed to environmental care. That is why a Chain of Custody control system for wood has been introduced so as to ensure that the raw materials used to manufacture the company's products are sourced from controlled forests. In this way, Gamadecor can offer products with full environmental guarantees.

MORE RESISTANT wall hangers.

The wall units are hung from the wall using two TRASER 6 hangers by Indaux. These are fully metallic and can each withstand a weight of up to 65 kg (130 kg per unit). These fittings are concealed behind the back of the unit and they distribute the weight evenly between the top and sides to give it greater stability. They can be regulated from inside the unit to make it easier to position.
