EASIE

E-SPORT AS ACCELERATOR FOR SOCIAL INCLUSIVE EDUCATION

THE EASIE PROJECT

The EASIE project's aim is to develop a new esport-in-education pedagogical methodology. With a general Adult Education and VET approach, the project proposes to improve social inclusion and increase creativity, as well as digital and entrepreneurial competencies.
Thanks to the support of EASIE Advisory Board, the project will validate and disseminate its results in a format that is easily and practically transferable and adaptable to other educational organisations, regardless of their nationality, educational system or academic level.

MANAGERIAL APPROACH

To implement esports in education requires a cultural change and a new approach at the management level. The project provides guidelines for local implementation, which regard both organisational strategy and infrastructure, and the involvement of project staff at all levels, including the essential commitment at the managerial level.

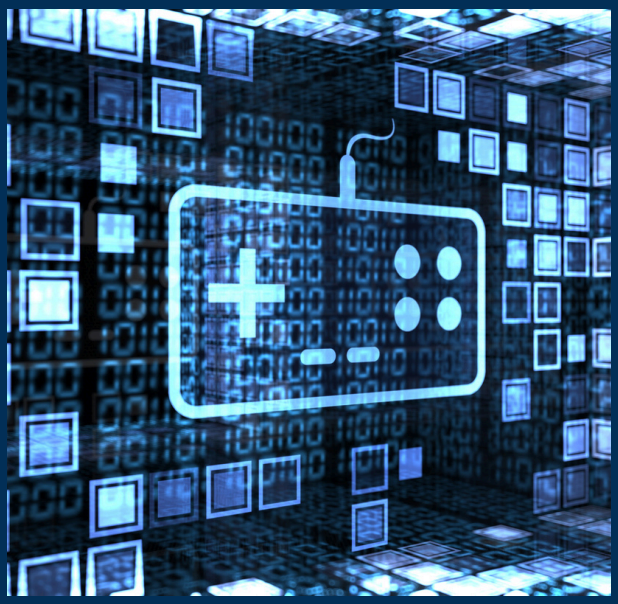
EASIE

E-SPORT AS ACCELERATOR FOR SOCIAL INCLUSIVE EDUCATION



DIDACTIC APPROACH

To implement this new methodology in their classrooms, teachers must be trained in esports and enhance their own digital and professional competencies. Through this training, teachers will be able to acknowledge, define and explore the possibilities of using esports as a pedagogical strategy and method. The training will also strengthen teachers' ability in engaging their students both in and out of the classroom, thus also increasing their competencies, as well as social inclusion.

As part of the project's free accessible resources, a wide range of peer-reviewed learning designs will be provided, to be used directly, as they are, or as an inspiration or model for teachers to adapt and develop their own material. In addition, we are currently developing blueprints for other institutions that wish to follow our path and integrate esports in education.
