EQUIPMENT FOR HARSH ENVIRONMENT

Environmental Policy

Emcomp International is an agency firm that markets and sells electrical components and solutions for harsh environments. Examples of harsh environments are extreme ambient temperatures, dirt, moisture and EX-zones. The products are shipped from our warehouses in Sweden or Hong Kong. Quality awareness and attentive service makes us the customers first hand choice.

With the environmental policy, we express our willingness to take our share of responsibility for improving the environment and contributing to sustainable development. Recycling thinking and management of natural resources is an important starting point for our business operations. The environmental work must be conducted within the framework of our business concept and be well integrated into the operational work. Through high competence among our employees and by constantly developing our knowledge of environmental effects, we can have a holistic view of environmental issues. Through a well-structured way of working and continuous improvements, the environmental impact of products, services and transport are reduced, as far as it is technically and financially possible. Current legislation is always a minimum requirement in Emcomp's operations.

In practice, Emcomp should:

- Minimize the generation of waste and prevent risks of emissions.
- Take environmental performance into account when choosing products and modes of transport and when designing processes and services.
- Continuously influence employees and suppliers to conduct open and committed environmental work. Conduct environmental work that will lead to continuous improvement.
- Inform all employees about the environmental policy.
- All employees are responsible for knowing, understanding, applying and further developing the policy.
