

# MRZ Reader Integration for C•CURE 9000

## How to optimize reading performance.

The best results are achieved with LOW RESOLUTION cameras. 720p is ideal.

It is important that the MRZ region is aligned **HORIZONTALLY**.

It is best to use a fixed support to put the ID card or passport in for reading, to ensure it is horizontal and at a fixed distance of the webcam. The webcam is ideally fixed to the wall or a fixed support.

The passport/ID card holder is available from Encode Labs as a 3D printable file.
