

## New Danish PtX strategy supports competitive green hydrogen production

Herning, Denmark, 16 December, 2021 - Everfuel is pleased to follow the publication of the new Power-to-X (PtX) and hydrogen strategy from the Danish Government. The strategy will play a significant role in making green hydrogen competitive and reduce the Danish CO<sub>2</sub>-emissions.

Last night the Danish Government launched their PtX and hydrogen strategy with the ambition of significantly contributing to CO<sub>2</sub>-reductions in Denmark. The strategy is an important first step in making Denmark one of Europe's leading nations within PtX and green hydrogen and in transforming hard to abate sectors.

The new strategy signals the importance of PtX and green hydrogen in the Danish energy transition and demonstrate how both areas are key components in the fight against climate change.

The strategy focuses, among other things, on the Southern part of Denmark as a hub for green energy and sector coupling, where the current natural gas connections to the rest of Denmark and Europe can be converted to hydrogen distribution. The initiatives in Southern Denmark will specifically influence Everfuel's new PtX facility, HySynergy, in Fredericia, with its location close to existing energy infrastructure.

"We are particularly pleased with the Government's focus on hydrogen infrastructure, which will make green hydrogen more competitive within a relatively short time frame. Now, we are eager to see how the well-intended ambitions in the strategy will come to live, and which concrete steps will be made in order to reach the 2030 goals. We look forward to participating in developing these steps - for instance through Hydrogen Denmark where our CTO, Uffe Borup, serves as Chairman", says Jacob Krogsgaard, CEO at Everfuel.

### **About Everfuel** | [www.everfuel.com](http://www.everfuel.com)

Everfuel is making green hydrogen for zero emission mobility commercially available across Europe, offering competitive all-inclusive hydrogen supply- and fueling solutions. We own and operate green hydrogen infrastructure and partner with vehicle OEMs to connect the entire hydrogen value chain and seamlessly provide hydrogen fuel to enterprise customers under long-term contracts. Green hydrogen is a 100% clean fuel made from renewable energy and key to electrification of the transportation sector in Europe and a sustainable future. We are a young ambitious company, headquartered in Herning, Denmark, and with activities in Norway, Denmark, Sweden, The Netherlands, Germany and Belgium, and a plan to grow across Europe. Everfuel is listed on Euronext Growth in Oslo under EFUEL.
