

ImaginationTM Half & Half

tooth colored archwires

- A complete aesthetic look with half tooth colored archwire.
- PTFE coating adds a minimal thickness (.0008 to .001 inch) to the archwire and is applied only to the labial surface.
- No friction between wire and bracket slot - only raw wire in contact with bracket.
- Longer lasting aesthetics as the labial side is not in contact with bracket and "scratches" the coating.
- Coating does not change fit relationship between wire and bracket thus wire protocol remains same. Movements such as torque and tipping are fully expressed according to the wire size - more control.
