Coolseal® Connectors are manufactured by fitting a high grade colour over a seamless 90% copper tube & filling with an anaerobic gel
The gel is inert until stimulated by the insertion of a wire into the connector
The gel provides a moisture resistant seal immediately but allow up to 3 hours curing time to allow the gel to be 80% hardened
Typical uses for Coolseal® include in-situ installation in automotive, motorcycle, marine & commercial vehicle after-market applications.
Coolseal® can be used anywhere a standard heatshrink or solder type butt connector is applied
